

REALIEF EXPERT

Kuya Bong Clinic Booking & Management App

Product walkthrough & operating-cost overview for a single iOS + Android app serving Patients and the Administrator across two clinics.

Expert Care, Real Relief

Physiotherapy & Chiropractic · Blueprint v0.3 · 2026

What's inside

01

The problem

Manual scheduling, package & follow-up tracking pain points.

02

The solution

One app, two roles, two clinics — built around the blueprint.

03

Patient experience

Onboarding, booking, appointments, packages, family.

04

Admin experience

Calendar, bookings, packages, products, master data.

05

Requirements coverage

How screens map to the confirmed user stories & rules.

06

Operating costs

Stores, Apple Pay, servers, database, domain — year-1 view.

CONTEXT

The problem today

Kuya Bong is a well-known physiotherapist & chiropractor running two clinics. Scheduling, package tracking and product follow-ups are all handled manually.

Why a dedicated app

- **Booking is manual & error-prone.** Patients don't know open slots or which clinic; phone/DM requests are easy to lose.
- **Packages are hard to track.** Sessions used, balance left, expiry and which family member used a session.
- **Clinic confusion.** Patients arrive at the wrong clinic (A vs B) or forget appointment details.
- **Product follow-up is reactive.** No record of last herbal/supplement purchase to prompt timely re-orders.
- **No single source of truth.** App, phone and walk-in bookings live in different places.

Source: Product Concept & Solution Blueprint v0.3 — Sections 3, 6 & user stories.

PROPOSED SOLUTION

The solution

A single downloadable app — published to the App Store and Google Play — serving both Patients and the Administrator through role-based access.

One app, two roles, two clinics

- **Single mobile app.** No separate patient/admin apps — role decides which screens appear.
- **Service-driven booking.** Pick a service first; its duration drives valid start times and end time.
- **Conflict-free scheduling.** Blocks therapist, patient and clinic overlaps — even across the two clinics.
- **Packages & family sharing.** Prepaid sessions, expiry rules, and linked spouse/child usage.
- **Products & follow-up.** Herbal/supplement catalogue with price-at-sale history and follow-up list.
- **Built for growth.** Every change runs through a store action — a clean seam for a future backend.

Tech today: React + TypeScript + Capacitor (iOS/Android), client-only mock data ready for a backend.

WALKTHROUGH · PATIENT

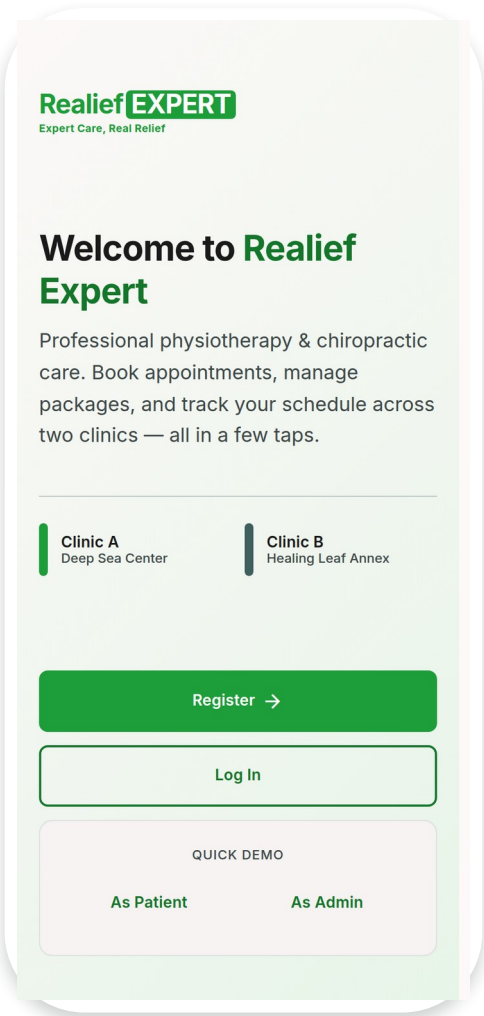

Patient experience

From welcome to confirmed booking in a few taps — large readable type, calm clinical styling, and clear separation of Clinic A and Clinic B.

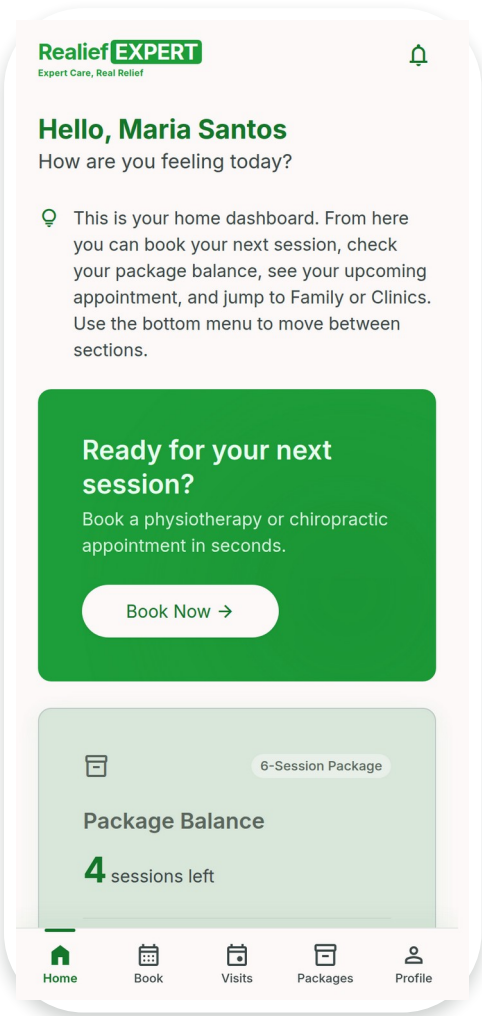

Welcome & sign-in

- **Register & verify**
Email/mobile registration with OTP/email verification before booking.
- **Role-based entry**
Verified patients land on a personalized home; admins are kept separate.
- **At-a-glance home**
Next appointment, clinic reminder, package balance and a one-tap Book shortcut.

Welcome — Clinic A & B

Patient home dashboard

Book in a few taps

- **Service first**

Choosing a service sets the duration (e.g. Physio 3h, Grounding 2h).

- **Only valid slots**

Start times without room for the full duration are hidden or blocked.

- **Right clinic, right time**

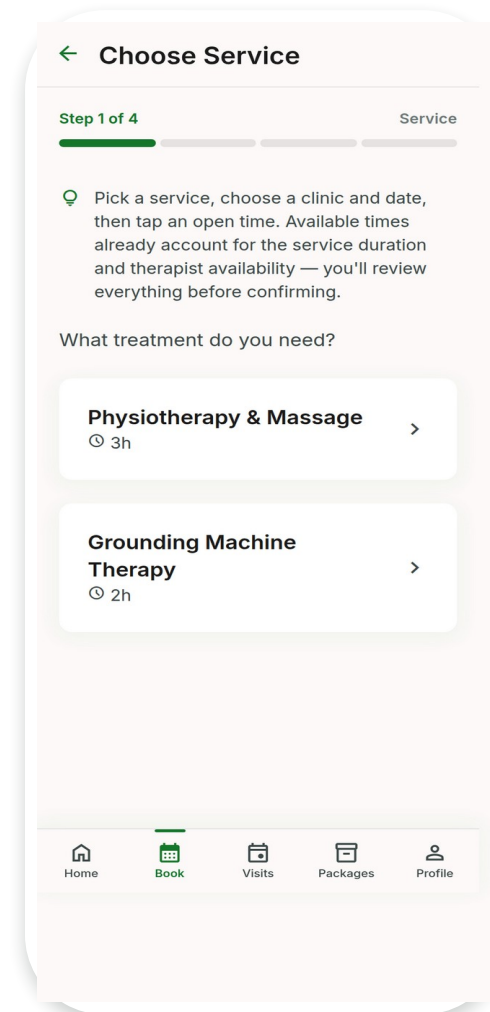

Clear Clinic A / B choice, then date and available time.

- **Review before confirm**

Service, clinic, date and start–end time shown before confirming.

- **Double-booking blocked**

Can't take a slot just taken, or overlap an existing appointment.

Service → clinic → date → time

Manage visits

- **Full history**

Tabs for upcoming, completed, cancelled and rescheduled visits.

- **Reschedule**

Move to another available slot within policy — no overlaps.

- **Cancel with a reason**

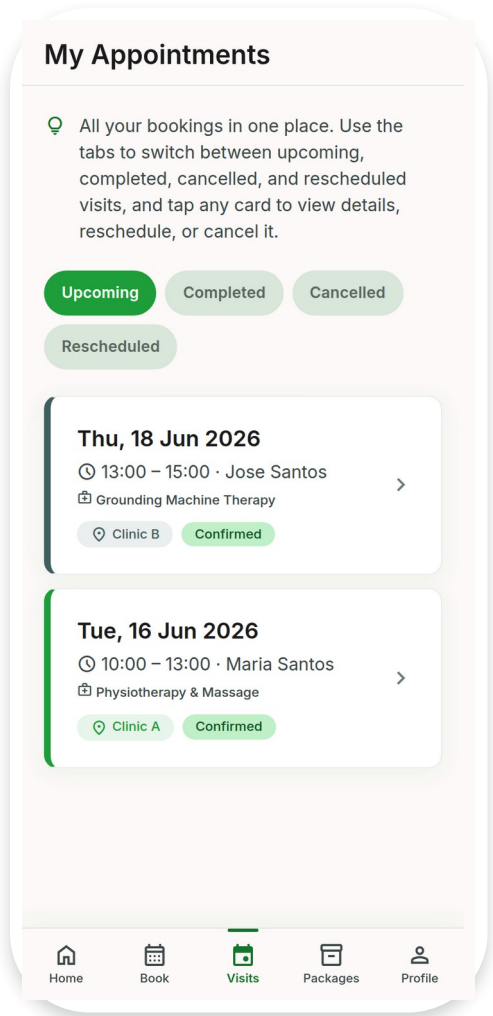

Pick an admin-managed reason; 'Other' allows a short note.

- **Cutoff respected**

Cancel/reschedule blocked past the policy cutoff (e.g. 24h).

- **Balance protected**

Cancelling/rescheduling never deducts a package session.

Upcoming / completed / cancelled

Packages & family sharing

- **See what's left**

Sessions remaining, expiry date and usage history per package.

- **Usage rules**

Blocked at zero balance or after expiry, even with sessions left.

- **Link an adult**

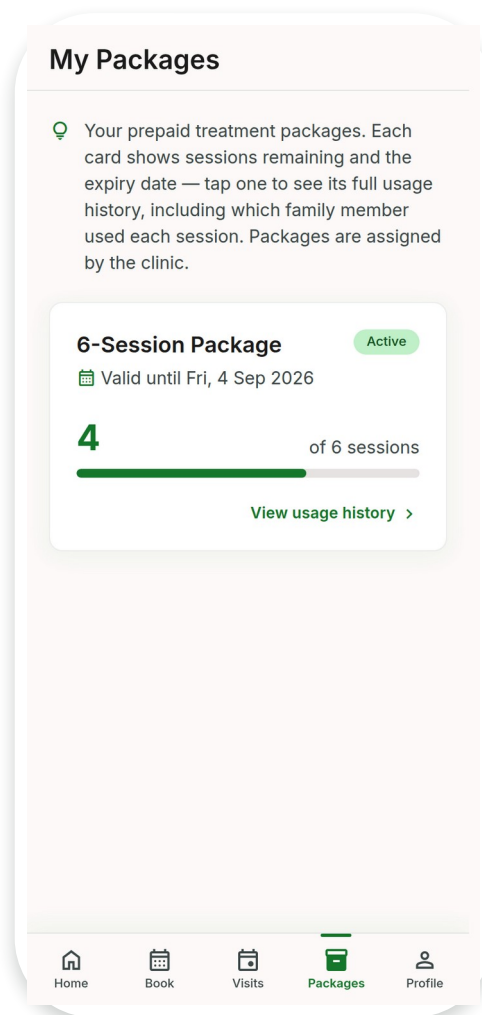

Spouse links by registered email/mobile — with their consent.

- **Add a child**

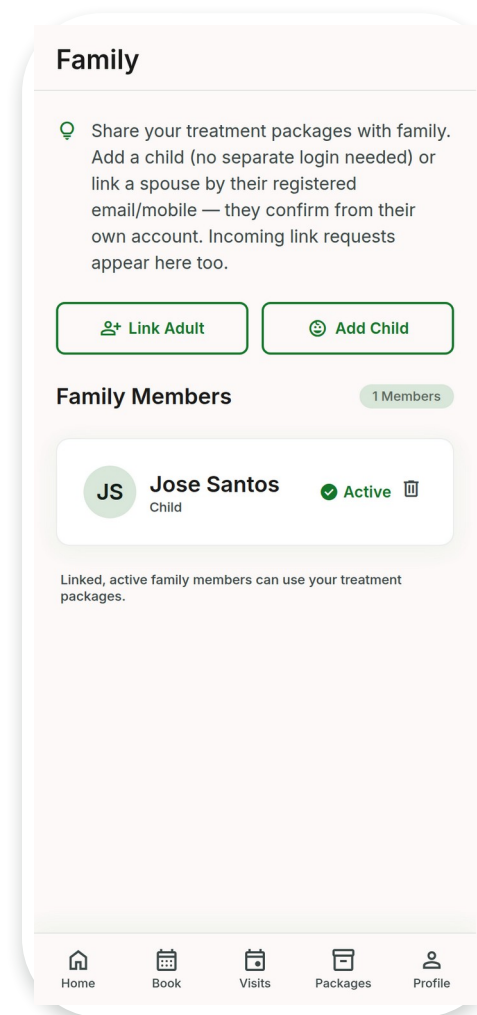

Children managed under the parent, no separate login.

- **Transparent usage**

See which family member used each session.

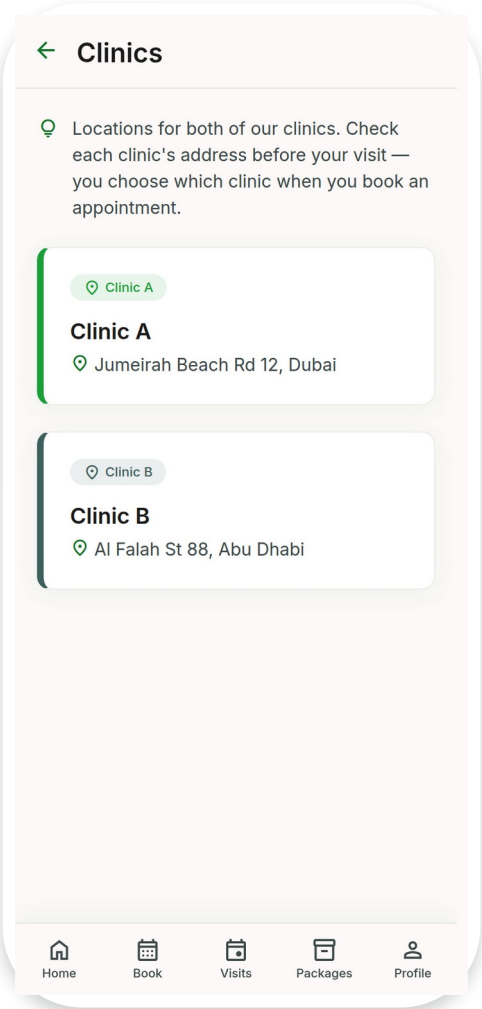

Package balance & expiry

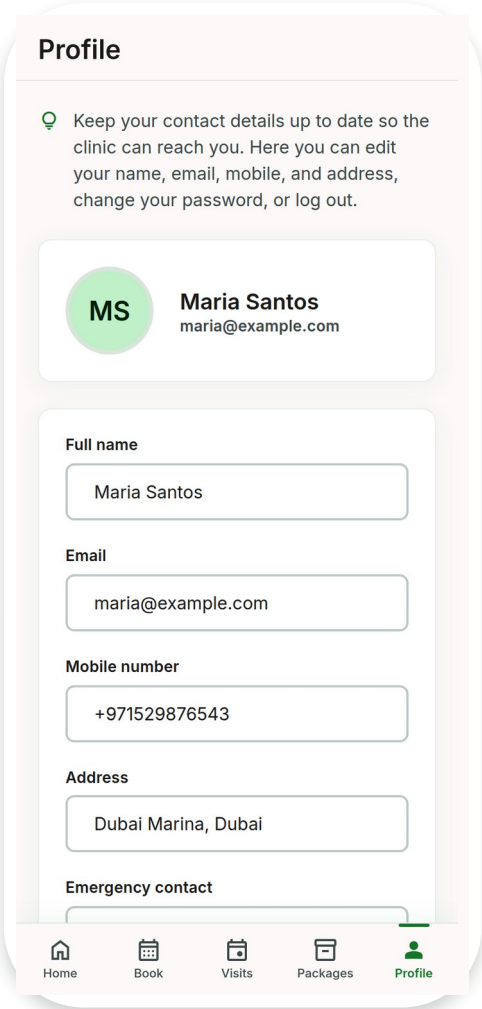

Link adult · add child

Clinics & profile

- **Know where to go**
Clinic A and Clinic B details reduce wrong-location visits.
- **Keep details current**
View and update profile; required fields are validated.
- **Secure account**
Login, password reset after identity verification, role separation.

Clinic A & B information

Profile & details

WALKTHROUGH · ADMIN

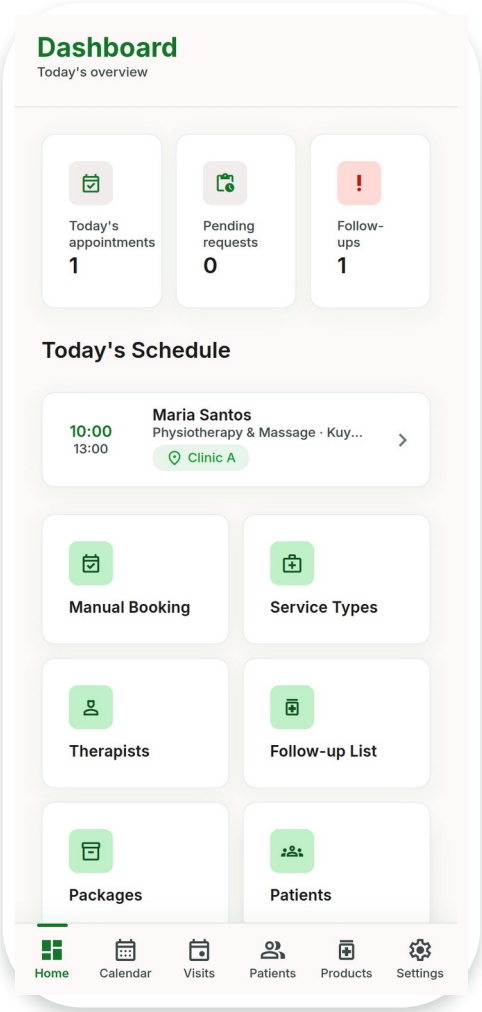

Admin experience

Kuya Bong runs the whole business in one place — availability, bookings, packages, products and the master data that powers booking logic.

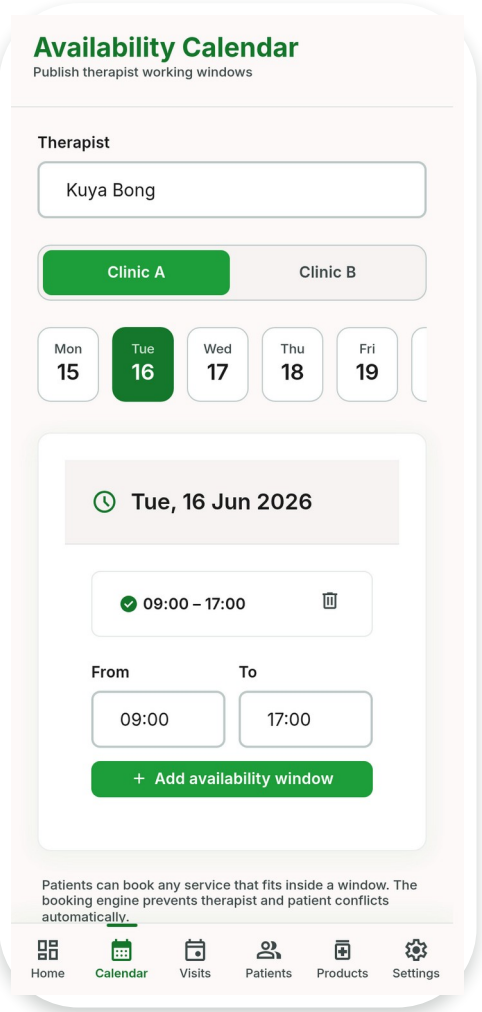

Dashboard & calendar

- **Day at a glance**
Today's appointments, pending requests and follow-up reminders.
- **Publish availability**
Open/edit/remove slots by clinic, date and time.
- **Duration-aware**
A 3-hour service reserves the therapist & clinic for the full window.
- **Safe edits**
Warned before removing a booked slot or creating overlaps.

Today, requests, follow-ups

Availability calendar

Appointments & manual booking

- **One inbox for all**
App, phone and DM bookings live in a single system.
- **Filter fast**
By clinic, date, status or therapist.
- **Complete a session**
Marking complete deducts one package session — only then.
- **Cancel on behalf**
Admin cancels with a reason + note; recorded as admin-initiated.

Phone/DM booking

Patients & packages

- **Patient 360**
Profile, family links and appointment history in one view.
- **Create packages**
Set sessions and validity period for prepaid bundles.
- **Assign & track**
Assign to a patient; balance, expiry and usage tracked automatically.
- **Clear no-results**
Helpful message when a patient search finds nothing.

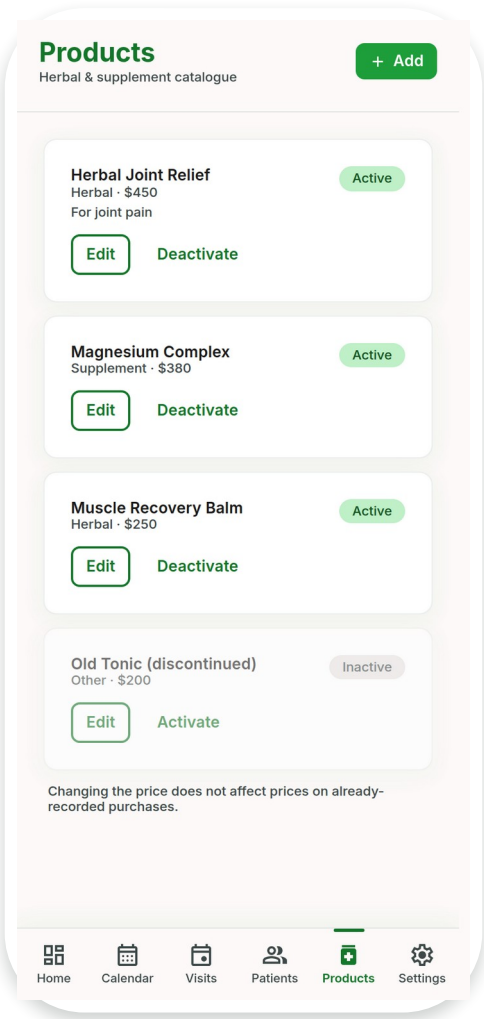

Search & open profiles

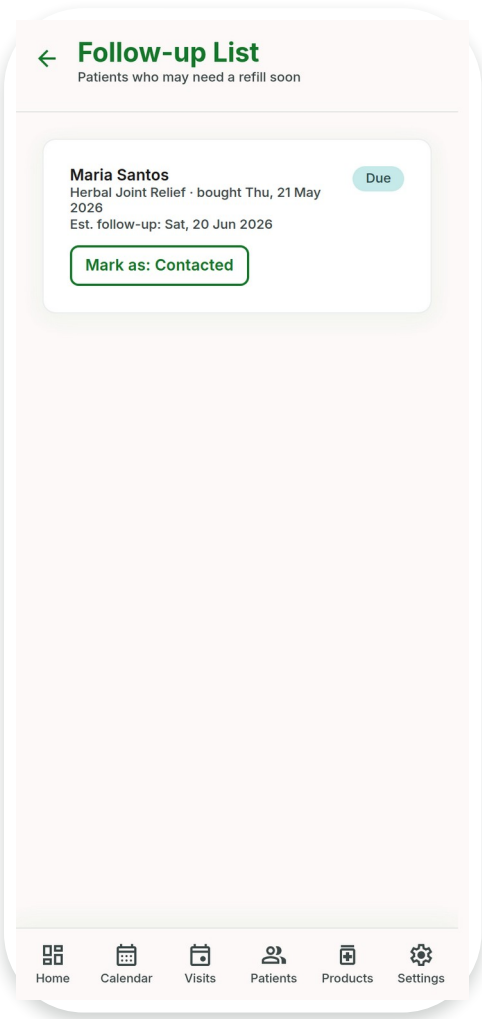

Create & assign

Products & follow-up

- **Manage catalogue**
Create, edit, activate/deactivate and price products.
- **Price snapshot**
Purchases store price-at-sale — later edits don't change history.
- **Record purchases**
Log a patient's purchase with date and price.
- **Timely follow-up**
See last-purchase dates and a follow-up list to re-engage patients.

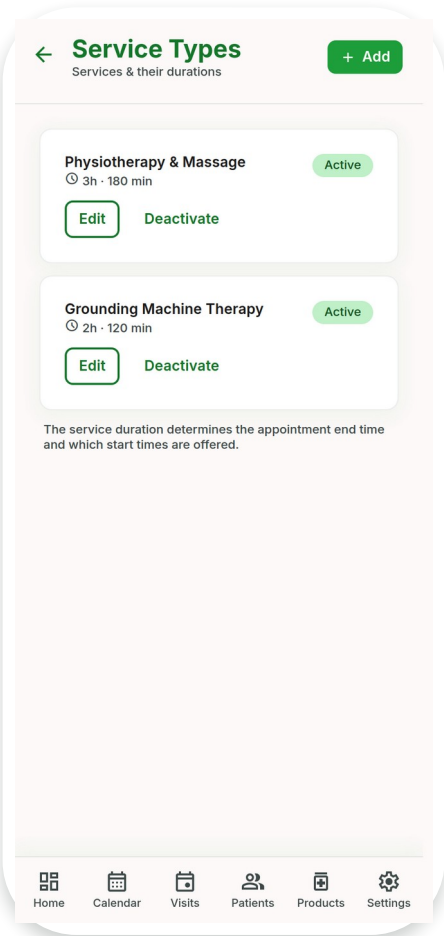

Catalogue & prices

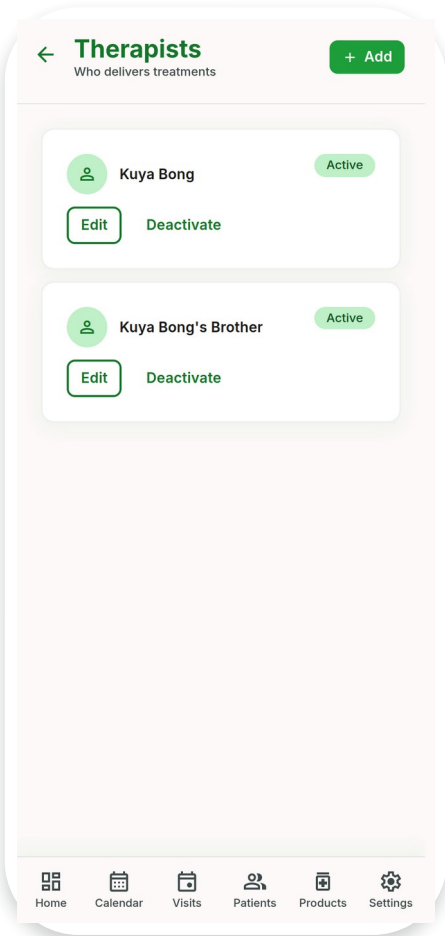

Follow-up list

Services, therapists & reasons

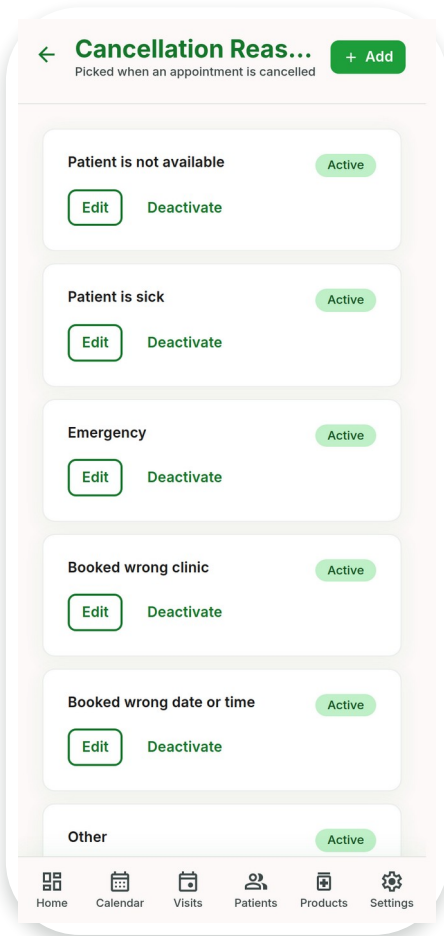

- **Service types**
Name + standard duration drive slot logic; activate/deactivate.
- **Therapists**
Add Kuya Bong + occasional therapists; assign and filter by therapist.
- **Cancellation reasons**
Managed list (incl. 'Other' + note) for consistent records.

Cancellation reasons

Requirements coverage

Blueprint / user-story area	Where it lives in the app	Status
1-2 Registration, verify, login, reset	Welcome · Register · Verify · Login · Forgot	Built
3 Profile & clinic info	Patient Profile · Clinics	Built
4 Service-driven booking	Patient Book (service→clinic→date→time→review)	Built
5 Reschedule & cancel + reasons	Appointments · Details · Cancellation reasons	Built
6-7b Availability, manual booking, admin cancel	Calendar · Appointments · Manual booking	Built
8-9 Completion, packages, balance, expiry	Appointments · Packages (patient & admin)	Built
10 Family linking & shared packages	Family · Package usage	Built
11 Herbal/supplement catalogue & follow-up	Products · Follow-ups	Built
14-18 Services, therapists, conflicts, reasons	Services · Therapists · Cancellation reasons	Built

Every mutation runs through a store action — the integration seam for the future backend.

Business rules enforced

- **Verify before booking.** Only verified accounts can reserve a session.
- **No double-booking.** Therapist, patient and clinic overlaps blocked across both clinics.
- **Deduct on completion only.** Cancel/reschedule never reduces a package balance.
- **Package guards.** Usage blocked at zero balance or after expiry.
- **Price snapshot.** Updating a catalogue price never rewrites past purchase records.
- **Cancel cutoff & reasons.** Patient cutoff (e.g. 24h) and a required reason on every cancellation.

Defaults (60-min vs service duration, auto-confirm, OTP/email) follow the blueprint and are easy to change.

BUDGET

Operating costs

What it costs to publish and run the app: one-time store fees plus recurring infrastructure. Figures are typical 2026 estimates in USD — confirm with chosen vendors.

Developer programs & store fees

Item	Type	Typical cost	Notes
Apple Developer Program	Annual	\$99 / yr	Required to publish on the App Store.
Google Play Developer	One-time	\$25 once	Single lifetime registration fee.
App Store review	Per release	\$0	Included; budget time, not money.
Code-signing / certs	Included	\$0	Managed inside the developer accounts.

Year-1 store cost ≈ \$124, then ≈ \$99 / yr ongoing (Apple).

Apple Pay & payments

Item	Type	Typical cost	Notes
Apple Pay integration	Per use	\$0 from Apple	Apple charges no extra fee for Apple Pay itself.
Payment processor	Per transaction	≈ 2.9% + \$0.30	Stripe/Adyen etc. on card / Apple Pay / Google Pay.
In-app purchase (digital)	Per transaction	15–30%	Only if selling digital goods in-app; physical services are exempt.
Merchant / gateway setup	One-time	\$0–\$50	Often free with modern processors.

Payments are OUT of the MVP scope (Blueprint 6.2). Booking real-world services can use external/processor payment to avoid the 15–30% IAP cut.

Servers, database & domain

Item	Starter (low traffic)	Growth	Notes
Frontend / web hosting	\$0 (Netlify/Vercel free)	\$0-\$20 / mo	Static build; current demo already on Netlify.
Backend / API (BaaS)	\$0 free tier	\$25-\$35 / mo	Supabase/Firebase; scales with usage.
Database (managed Postgres)	\$0 free tier	\$15-\$50 / mo	Often bundled with the BaaS above.
File / image storage	\$0-\$1 / mo	\$1-\$10 / mo	Profile photos, product images.
Domain name	\$12-\$20 / yr	\$12-\$20 / yr	.app/.com; the only must-buy day one.
SMS OTP (optional)	pay-as-you-go	≈ \$0.05-\$0.08 / SMS	Twilio; email OTP is ~free via SES/Resend.
Push notifications	\$0	\$0	Free via Apple APNs & Firebase FCM.

Lean launch can run at ~\$0/mo infra on free tiers — only the domain (~\$15/yr) is unavoidable early on.

Year-1 cost summary

Scenario	One-time	Recurring	≈ Year-1 total
Lean launch (free tiers + domain)	\$25 (Play)	\$99/yr Apple + \$15/yr domain	≈ \$140
Typical small clinic (paid BaaS)	\$25 (Play)	~\$30/mo infra + \$99/yr Apple + \$15/yr domain	≈ \$475
Growth (more traffic + SMS OTP)	\$25 (Play)	~\$60/mo infra + SMS + \$99 + \$15	≈ \$850+

Excludes development effort and payment-processor % (charged only when you actually take payments).

Cost takeaways

- **Cheap to start.** ~\$140 covers year one on free infra tiers + both store accounts + a domain.
- **Apple Pay is free to add.** You only pay the payment processor's ~2.9% when money actually moves.
- **Avoid the IAP cut.** Booking physical clinic services can settle outside in-app purchase (no 15–30%).
- **Infra scales with patients.** Stay on free tiers until real usage, then ~\$30/mo handles a busy single clinic.
- **Recurring floor is small.** \$99/yr Apple + ~\$15/yr domain are the only guaranteed ongoing costs.
- **Plan for the backend.** Biggest future cost is engineering time, not hosting.

All figures are 2026 list-price estimates in USD — validate against your chosen vendors and region.

Expert Care, Real Relief

One app. Two roles. Two clinics.

A working prototype today — booking, packages, family sharing, products and master data — ready for backend integration and store release.
