

Kuya Bong App - Demo Update Summary

Version

Prepared for: Raymond (Sales) | Date: 23 Jun 2026 | Ref: KBA-BP-20260622-001

This build adds the newest items from Kuya's v0.7 blueprint on top of the earlier demo. Everything below is live and ready to show.

New in This Update (v0.7)

- **Physiotherapist Login** Physiotherapists are now real app users, not just names. Kuya appoints a registered user as a physiotherapist; that person can log in and see ONLY their own assigned appointments ('My Schedule'), and can reschedule or cancel their own bookings.
- **User Deactivation** Kuya (Master Admin) can deactivate a user (e.g. someone who left). A deactivated user can no longer log in or book, but all their history (appointments, packages, sales) is kept. They can be reactivated anytime.
- **Version Badge** A small version label (e.g. v0.7.0) now shows at the top-right of every screen, so we can always confirm which build is on screen.

Already in the Demo (Earlier Updates)

- Clinics (add/edit/deactivate), service types & durations, conflict-free booking, cancellation reasons, manual booking.
- Packages, Family sharing, Friends + package-credit transfer, products with photos, purchases & follow-up.
- Announcements, financial reports, household report, Sub-Admin permission control, and an audit log.

How to Demo (Login Accounts)

Role	Email	Password
Master Admin (Kuya)	admin@reliefexpert.app	admin123
Sub-Admin (Erick)	staff@reliefexpert.app	staff123
Physiotherapist (Dr. Lina)	physio@reliefexpert.app	physio123
Patient (Maria)	maria@example.com	patient123
Patient (Ahmed)	ahmed@example.com	patient123

- **Physiotherapist** Log in as Dr. Lina to show 'My Schedule' with only her appointments, then reschedule/cancel one.
- **Deactivation** As Kuya: Patients > open a patient > Deactivate; then try logging in as that patient (blocked).

Pending / Next Phase

- Minor: clinic contact field and family parent/sibling labels.
- Real phone push notifications and native phone PDF share (demo uses in-app + browser Save-as-PDF).
- Online payment, advanced announcement targeting, and Excel/CSV export remain Phase 2.

Demonstration build with sample data and no live backend yet. Prepared by the development team.
