

Kuya Bong App

Prototype Update Meeting and 3-Slide Client Presentation

Instruction for Analyst and Sales Team

Purpose: Prepare a client-facing update, present the prototype direction, and collect feedback from Kuya Bong.

Document Intent

This document guides the preparation of a short client-facing presentation with 3 main slides, excluding the cover page. It also provides guidance for the prototype demonstration and feedback collection.

Kuya Bong App - Prototype Update Meeting and 3-Slide Client Presentation

We are now at the stage where Kuya Bong needs to receive a project update and start experiencing the look and feel of the app prototype.

The purpose of this meeting is not yet to request final approval of the full system. The purpose is to show Kuya Bong that we understand his business situation, explain how the app will support his clinic operations, and invite him to interact with the prototype so we can collect feedback early.

Please prepare a short client-facing presentation with 3 main slides, excluding the cover page.

The presentation should be simple, visual, and easy for Kuya Bong to understand. Avoid making it too technical. The story should move from:

1. Current business situation and problems.
2. Proposed app features and how the app solves the problems.
3. Simple investment options for launching and maintaining the app.

Cover Page - Not Included in the 3 Slides

The cover page should include:

- Project name: Kuya Bong App
- Meeting purpose: Prototype Update and Feedback Session
- Prepared by: Analyst and Sales Team
- Date of meeting
- Optional subtitle: A simple mobile app to help manage bookings, services, packages, and product follow-ups

The cover should look professional, clean, and suitable for a small healthcare or physiotherapy business.

Slide 1 - Current Business Situation and Key Problems

Slide Objective

This slide should show that we understand how Kuya Bong's business currently works and what problems the app is intended to solve. The slide should be mostly visual and use four figures or illustration blocks.

Suggested Slide Title

Understanding Kuya Bong's Current Business Situation

Recommended Figure Layout

Figure	Topic	What to Show
Figure 1	Two Clinics and Therapist Movement	Show Clinic A, Clinic B, Kuya Bong moving between clinics, patients booking sessions, and the need to avoid time conflicts.
Figure 2	Two Business Categories	Show Services and Products as two boxes, columns, or a simple business model diagram.
Figure 3	Patient Booking and Package Tracking Problems	Show that patients cannot easily see free slots, may book the wrong

		clinic/time, and may struggle to track paid package usage.
Figure 4	Product Sales and Follow-Up Problem	Show product sold, purchase date recorded, estimated consumption period, and follow-up reminder/list.

Figure 1 - Two Clinics and Therapist Movement

- Show that Kuya Bong currently has two clinics: Clinic A and Clinic B.
- Show that Kuya Bong is currently the main physiotherapist.
- Show that additional therapists may join in the future, such as his brother or other staff.
- Show Kuya Bong moving between clinics depending on his schedule.
- Show patients booking sessions in advance.
- Highlight the need to avoid time conflicts between clinics.

Suggested Message

Kuya Bong needs to manage his schedule carefully because he may need to move between clinics to serve booked patients.

Figure 2 - Two Business Categories: Services and Products

Category	Examples
Services	Physiotherapy & Massage; Grounding Machine Therapy
Products	Herbals; supplements; other health-related products

Suggested Message

The app should support both appointment-based services and product follow-up records.

Figure 3 - Patient Booking and Package Tracking Problems

Show the current difficulty from the patient's perspective. Patients currently have difficulty with:

- Knowing which appointment slots are free.
- Booking the correct clinic, date, and time.
- Rescheduling or cancelling easily.
- Tracking how many paid package sessions they have already used.
- Knowing how many package sessions remain.

Suggested Message

Patients need a clearer way to book sessions and track their package balance.

Figure 4 - Product Sales and Follow-Up Problem

Show that Kuya Bong sells herbals and supplements and needs to know when to follow up. The illustration should show:

- Product sold to patient.
- Purchase date recorded.
- Estimated consumption period.
- Follow-up reminder or follow-up list.

Suggested Message

Kuya Bong needs a simple way to remember what product was sold, when it was sold, and when to follow up with the patient.

Slide 1 Design Guidance

Use icons, simple diagrams, and short text. Do not overload the slide with long paragraphs. The slide should make Kuya Bong feel that we understand his real operating challenges.

Slide 2 - Proposed App Features and User Roles

Slide Objective

This slide should explain the proposed app solution and its main features. The important message is: There will be one mobile app, but it will serve two roles: Kuya Bong as administrator and patients as users.

Suggested Slide Title

One App Serving Two Main Roles

Recommended Layout

- Place a mobile app illustration in the center of the slide.
- Label the center as: Kuya Bong App.
- Add the phrase: One mobile app with role-based access.
- Around the app, show two role areas: Kuya Bong / Admin and Patient.
- Place the main features around the app with short explanations.

Admin Features Around the App

Feature	Brief Explanation
Manage Clinics	Update clinic names and manage clinic-related booking views.
Manage Services	Add services such as Physiotherapy & Massage or Grounding Machine Therapy, including duration.
Manage Therapists	Add therapist names and prevent schedule conflicts.
Manage Availability	Publish available time slots by clinic, service, therapist, date, and time.
Manage Bookings	View, approve, move, cancel, or manually create bookings.
Manage Packages	Assign treatment packages, track used sessions, remaining balance, and expiry.
Manage Products	Maintain herbal and supplement list, including price.
Product Follow-Up	See when patients may need to be contacted again after product purchase.
Manage Cancellation Reasons	Maintain selectable reasons for cancelled appointments.

Patient Features Around the App

Feature	Brief Explanation
Register and Login	Patients create verified accounts and can reset password if forgotten.
Book Appointment	Select service, clinic, date, and available time slot.
Reschedule or Cancel	Patients can move or cancel reservations with a selected cancellation reason.
View Appointments	Patients can view upcoming and previous bookings.

View Package Balance	Patients can see used sessions, remaining sessions, and expiry date.
Family Link	Patients can link spouse account or add children under family profile.
Receive Confirmation	Patients receive clear booking confirmation with clinic, date, time, and service.

Slide 2 Design Guidance

This slide should be more feature-oriented than Slide 1, but still easy to understand. Use short labels and icons. The analyst may use small callout bubbles around the app mockup.

Key Message

We are not building two apps. We are building one app with different access depending on the user role.

Slide 3 - Investment Options

Slide Objective

This slide should explain how much Kuya Bong needs to spend or invest to start using the app and how much he should expect to spend from the next year onward. The purpose of giving two options is to make the decision simple for him.

Suggested Slide Title

Simple Investment Options to Start Using the App

Important Note for the Team Preparing the Slide

Please verify all costs before presenting to the client. The cost section should include only confirmed and explainable items. Do not guess or overcomplicate the cost structure.

At minimum, each option should show:

- What Kuya needs to spend now to start enjoying the app.
- Total initial amount.
- What Kuya needs to spend every year from next year onward.

Suggested Layout

Use two large blocks side by side. The final option names can be adjusted by the sales team.

Option 1	Option 2
Basic Launch Option	Managed Launch Option

Option 1 - Basic Launch Option

This option should show the minimum required cost to launch and operate the app.

Cost Item	Description
Google Play Developer Account	Required to publish the app on Google Play Store.
Apple Developer Account	Required to publish the app on Apple App Store.
Database / Backend Hosting	Required to store users, bookings, packages, services, therapists, and product records.
Domain or Supporting Services	Include only if needed.

Maintenance / Support

Include only if part of the offer.

Show: Amount to pay now, total initial cost, and estimated yearly cost from next year onward.

Option 2 - Managed Launch Option

This option should include the same base requirements, plus additional support or management services if we want to offer them.

Cost Item	Description
Google Play Developer Account	Required for Android app publishing.
Apple Developer Account	Required for iOS app publishing.
Database / Backend Hosting	Required to run the app.
Setup and Publishing Assistance	Support for store submission and configuration.
Monitoring and Basic Support	Support after launch.
Minor Updates Package	Optional small improvements or adjustments after feedback.

Show: Amount to pay now, total initial cost, and estimated yearly cost from next year onward.

Slide 3 Design Guidance

- Keep this slide very simple.
- Use two option cards.
- Each card should include option name, what is included, pay now, total initial cost, yearly cost from next year onward, and a short recommendation note if needed.
- Example note for Option 1: Suitable if Kuya wants the lowest starting cost.
- Example note for Option 2: Suitable if Kuya wants us to manage more of the setup, publishing, and early support.

Do not present cost details as final unless they have been verified. If some prices are still estimates, clearly mark them as estimates. If there are third-party costs such as Apple, Google, hosting, SMS, or email verification, explain that these are external costs and may change depending on provider, country, usage, and account type.

Prototype Demonstration Guidance

After the slides, allow Kuya Bong to interact with the prototype. The team should ask him to test the experience from two perspectives: Patient Perspective and Admin Perspective.

Patient Perspective

- Opening the app.
- Registering or logging in.
- Selecting a service.
- Choosing clinic, date, and time.
- Viewing booking confirmation.
- Viewing appointment details.
- Cancelling or rescheduling, if included in the prototype.
- Viewing package balance, if included in the prototype.

Admin Perspective

- Viewing the admin dashboard.
- Managing services.

- Managing therapists.
- Creating or viewing availability.
- Viewing appointment list.
- Cancelling or moving an appointment.
- Viewing patient package details.
- Viewing product records or follow-up list.

Feedback to Collect During the Meeting

Please capture feedback in a structured way.

Feedback Area	Questions to Ask
Look and Feel	Does the app look professional and suitable for Kuya Bong's brand?
Booking Flow	Is the booking process clear and simple for patients?
Admin Flow	Can Kuya Bong easily understand how to manage appointments?
Services and Duration	Are the listed services and durations correct?
Therapists	Does the therapist management concept match his real operation?
Packages	Does the package balance and expiry logic match his business rule?
Products	Does the product follow-up concept help him manage herbal and supplement customers?
Cost Options	Which investment option is easier for him to accept?
Missing Items	Is there anything important missing before development continues?

Expected Outcome of the Meeting

By the end of the meeting, we should aim to achieve the following:

7. Kuya Bong understands the proposed app concept.
8. Kuya Bong confirms whether the prototype direction is acceptable.
9. Kuya Bong provides feedback on the look and feel.
10. Kuya Bong confirms key business rules, especially services, durations, therapist scheduling, booking flow, packages, and product follow-up.
11. Kuya Bong understands the investment options.
12. The team captures action items for the next prototype or requirements update.

Meeting Principle

Keep the meeting practical and interactive. The goal is not only to present, but also to let Kuya Bong experience the prototype and give feedback before we move further.
