

KUYA BONG

MOBILE APP

Product Concept and Solution Blueprint

Document Version: 0.2 - Updated Draft

Status: For Internal Review and Stakeholder Discussion

Primary Audience: Developer and Systems Analyst

*A structured foundation for GUI design, application planning,
and a client-facing solution presentation.*

HOW TO USE THIS BLUEPRINT

This blueprint is designed for two working audiences. It distinguishes confirmed requirements from recommendations and open questions so early design work can proceed without treating assumptions as final decisions.

Audience	Primary Use
Developer	Begin planning the application structure, database, user roles, workflows, and initial GUI wireframes.
Systems Analyst	Prepare a visual proposal and marketing package that demonstrates the client needs and explains the proposed solution clearly.

DOCUMENT MAP

Sections	Focus
1-5	Context, business problems, proposed solution, and objectives
6-7	MVP scope, user roles, and permissions
8-12	Core workflows and business concepts
13-15	Navigation, initial screens, and conceptual data model
16-18	Business rules, non-functional requirements, and MVP priorities
19-24	Client value, open questions, risks, next steps, and terminology

1. Document Purpose

This document defines the initial concept, business requirements, MVP scope, workflows, user roles, and proposed screen structure for the **Kuya Bong Mobile App**.

The document is designed for two audiences:

Audience	Primary Use
Developer	Begin planning the application structure, database, user roles, workflows, and initial GUI wireframes.
Systems Analyst	Prepare a visual proposal and marketing package that demonstrates an understanding of the client's needs and explains the proposed solution clearly.

This document is not yet a final software specification. Open questions must be discussed with the client before development decisions are finalized.

2. Business Background

Kuya Bong is an experienced physiotherapist and chiropractor who is well known in his city. Many patients visit him for physiotherapy, muscle pain, body aches, chiropractic support, and massage-related services.

He operates his business under the name "**Kuya Bong**" and currently serves patients from two clinics.

The official clinic names have not yet been confirmed. For the purpose of this document, they will be referred to as:

- **Clinic A**
- **Clinic B**

The business currently has two main service areas:

Business Area	Description
Physiotherapy and Massage Services	Patients book appointments before visiting a clinic for treatment.
Herbal and Supplement Sales	Patients regularly purchase herbal products or supplements from Kuya Bong.

3. Business Problems

3.1 Appointment Booking Challenges

Kuya Bong has many patients, making appointment scheduling difficult to manage manually.

Patients may experience the following problems:

- Difficulty knowing which appointment slots are available.
- Confusion about whether the appointment is at Clinic A or Clinic B.
- Difficulty moving or cancelling an existing appointment.
- Forgetting appointment details after booking.

Kuya Bong may experience the following problems:

- Difficulty publishing and updating available time slots.
- Difficulty tracking who booked each slot.
- Difficulty handling bookings received through phone calls or direct messages.
- Difficulty confirming whether a session has been completed.
- Difficulty managing cancellations and rescheduling requests.

3.2 Treatment Package Tracking Challenges

Kuya Bong offers discounted treatment packages. For example, a patient may purchase a package that allows up to six treatment sessions.

The current challenge is tracking:

- Which patient owns the package.
- How many sessions have already been used.
- How many sessions remain available.
- Whether the package has expired.
- Whether the package may be shared with family members.

- Which family member used each session.

3.3 Herbal and Supplement Follow-Up Challenges

Patients regularly purchase herbal products or supplements. Kuya Bong wants to know when a patient last purchased a product so that he can follow up when the product may be close to finishing.

The initial requirement is not to operate a full online store. The priority is to record purchase history and support timely customer follow-up.

4. Proposed Solution

The proposed solution is a single mobile application called the **Kuya Bong App**, published on:

- Apple App Store
- Google Play Store

The app will support both patients and Kuya Bong through a single downloadable application.

The app will use **role-based access**:

User Role	Main Access
Patient	Register, manage profile, view availability, book appointments, reschedule, cancel, view package information, and manage linked family members.
Kuya Bong / Administrator	Manage clinics, publish appointment slots, manage bookings, record completed sessions, assign treatment packages, link family members, manage the herbal and supplement catalogue including prices, and record product purchases.

The MVP should not require separate mobile applications for patients and administrators.

5. Product Objectives

The initial app should:

1. Simplify appointment booking for patients.
2. Reduce confusion between Clinic A and Clinic B.
3. Allow Kuya Bong to publish and modify his weekly or monthly availability.
4. Allow Kuya Bong to view bookings by clinic, date, and time.
5. Support patient registration with verified contact details.
6. Allow patients to book, reschedule, and cancel appointments.
7. Allow Kuya Bong to create and assign discounted treatment packages.
8. Track treatment package usage, remaining balance, and expiry dates.
9. Allow treatment package usage to be shared with linked family members.
10. Record herbal and supplement purchase history for customer follow-up.
11. Allow patients to reset a forgotten password securely.
12. Allow Kuya Bong to manage a catalogue of herbal and supplement products, including product prices.
13. Create a foundation for future clinic expansion and payment features.

6. MVP Scope

6.1 Included in the MVP

Feature Area	Included Capabilities
Single Mobile App	One application for patients and Kuya Bong, with different access based on user role.
User Registration	Patient registration using verified email address, verified mobile number, or both.
Login and Account Access	Secure login and access to the correct role-based screens.
Password Reset	Patients can securely reset a forgotten password.
Patient Profile	Basic patient information and linked family information.
Clinic Information	Display Clinic A and Clinic B, including editable clinic names.
Appointment Availability	Kuya Bong can publish, edit, and remove appointment slots by clinic, date, and time.

Feature Area	Included Capabilities
Appointment Booking	Patients can search availability and reserve an appointment.
Booking Confirmation	The system displays appointment confirmation, including clinic, date, and time.
Rescheduling	Patients can move an appointment to another available slot.
Cancellation	Patients and Kuya Bong can cancel appointments before the session.
Manual Booking	Kuya Bong can create an appointment manually when a request is received by phone or another channel.
Reservation Approval	Kuya Bong can manually approve a reservation when required.
Session Completion	Kuya Bong can mark an appointment as completed after treatment.
Treatment Packages	Kuya Bong can create packages with a defined number of sessions and validity period.
Package Assignment	Kuya Bong can assign a package to a patient.
Package Usage Tracking	The app tracks the number of sessions used, sessions remaining, expiry date, and family member usage.
Family Linking	Adult patient accounts can be linked, such as spouses. Children can be added manually under a parent account without creating their own login.
Herbal and Supplement Catalogue	Kuya Bong can create, edit, activate, deactivate, and price herbal or supplement products.
Herbal and Supplement Purchase Records	Kuya Bong can record product purchases from the managed catalogue and review the patient's latest purchase date.
Administrative Overview	Kuya Bong can review appointments, patient records, packages, and supplement purchase history.

6.2 Outside the Current MVP Scope

Future Feature	Notes
Online Payment	Patients may pay through the app in a future release.
Treatment Service and Package Price Management	Future price management for therapy services and treatment packages. Herbal and supplement catalogue prices are included in the MVP.
New Clinic Creation	The system should be designed with future growth in mind, but adding or closing clinics is outside the current MVP scope.
Full E-Commerce Store	Online ordering, checkout, delivery, and inventory management are not part of the current MVP.
Separate Staff Roles	Receptionists, therapists, and branch managers are not yet confirmed as separate system users.
Advanced Marketing Automation	Automated sales campaigns and customer segmentation are not included unless added later.

7. User Roles and Permissions

7.1 Patient Role

Function	Patient Access
Register and verify account	Yes
Log in and update profile	Yes
Reset forgotten password	Yes
View clinic information	Yes
Search available appointment slots	Yes
Select clinic, date, and time	Yes
Book an appointment	Yes

Function	Patient Access
View booking confirmation	Yes
Reschedule appointment	Yes
Cancel appointment	Yes
View appointment history	Recommended
Link spouse or another adult family account	Yes
Add children under parent account	Yes
View package balance and expiry date	Recommended
View family package usage	Recommended
Record herbal or supplement purchases	No
Manage appointment availability	No
Mark treatment sessions as complete	No

7.2 Kuya Bong / Administrator Role

Function	Administrator Access
Log in as administrator	Yes
Update clinic names	Yes
Publish available appointment slots	Yes
Edit or remove appointment slots	Yes
View appointments by clinic, date, and time	Yes
View patient details	Yes
Approve or reject reservation requests	Yes
Create manual bookings	Yes
Reschedule or cancel appointments	Yes
Mark sessions as completed	Yes
Create treatment package definitions	Yes
Assign packages to patients	Yes
View package balance and expiry date	Yes
Link family members to a package	Yes
Manage herbal and supplement catalogue	Yes
Update herbal and supplement prices	Yes

Function	Administrator Access
Record herbal and supplement purchases	Yes
Review latest patient purchase dates	Yes
Identify patients who may need follow-up	Recommended

8. Core User Journeys

8.1 Patient Registration and Booking Journey

```

Download App
  v
Create Account
  v
Verify Email Address and/or Mobile Number
  v
Log In
  v
Search Available Appointment Slots
  v
Select Clinic
  v
Select Date and Time
  v
Review Booking Details
  v
Submit Reservation
  v
Receive Booking Confirmation

```

8.2 Administrator Availability Management Journey

```

Administrator Login
  v
Open Availability Calendar
  v
Select Clinic
  v
Select Date or Date Range
  v
Add Available Time Slots
  v
Publish Availability
  v
Review Incoming Bookings
  v
Approve, Modify, or Cancel When Required

```

8.3 Completed Treatment Session Journey

```

Open Daily Appointment List
  v
Select Patient Appointment
  v
Confirm Patient Attendance
  v
Mark Session as Completed
  v
Check Whether a Package Applies
  v
Deduct One Session from the Correct Patient or Family Package
  v
Store Treatment History

```

8.4 Treatment Package Journey

```

Create Package Definition
  v
Enter Package Name
  v
Enter Number of Included Sessions
  v
Enter Validity Period
  v
Assign Package to Patient
  v
Calculate Expiry Date
  v
Optionally Link Eligible Family Members
  v
Deduct Sessions After Completed Treatments
  v
Prevent Usage After Balance Reaches Zero or Package Expires

```

8.5 Herbal and Supplement Follow-Up Journey

```

Open Product Catalogue
  v
Select or Maintain Product and Price
  v
Open Patient Record
  v
Record Product Purchased
  v
Record Purchase Date
  v
Optionally Record Quantity and Notes
  v
Review Last Purchase Date
  v
Identify Patients for Follow-Up
  v
Contact Patient Outside the App or Through a Future Notification Feature

```

9. Proposed Appointment Statuses

A clear appointment status model will help the developer avoid inconsistent booking behavior.

Status	Description
Available	Slot has been published and may be booked.
Pending Approval	Patient requested the slot, but administrator approval is required.
Confirmed	Reservation has been approved and the slot is reserved.
Rescheduled	Original booking was moved to a new slot.
Cancelled by Patient	Patient cancelled before the appointment.
Cancelled by Administrator	Kuya Bong cancelled before the appointment.
Completed	Treatment session has been delivered.
No-Show	Patient did not attend the appointment. Recommended for discussion.

Recommended Decision

The client should confirm whether all bookings require manual approval or whether bookings should normally be confirmed automatically when a slot is available.

A practical MVP approach is:

- Automatically confirm bookings for published slots.
- Allow Kuya Bong to manually modify, cancel, or create appointments.
- Use manual approval only when needed.

This reduces unnecessary administrative work.

10. Proposed Treatment Package Rules

Rule	Initial Requirement
Package Name	Administrator defines the package name.
Included Sessions	Administrator defines the number of sessions, such as six sessions.
Assignment	Administrator assigns the package to a patient.
Start Date	Recorded when the package is assigned or activated.
Expiry Date	Calculated using assignment date plus a defined number of days or months.
Session Deduction	One session is deducted when an appointment is marked as completed.
Expired Package	Remaining sessions cannot be used after the expiry date.
Zero Balance	Package cannot be used when all sessions have been consumed.
Family Sharing	Package may be shared with linked eligible family members.
Usage History	Each deduction should record the patient, family member, appointment, clinic, date, and administrator action.

Recommended Safeguard

Package deductions should not occur when an appointment is booked. The session should be deducted only after the treatment is marked as completed.

This avoids incorrect balance reductions when a patient cancels or reschedules an appointment.

11. Family Account Concept

The app should support a simple family relationship model.

Family Member Type	Registration Requirement	Proposed Handling
Adult Patient	Own registered account	Adult users may connect their accounts, such as spouses.
Child	No separate app login required	Parent adds the child manually under the parent account.
Other Dependent	To be confirmed	May be added manually if approved by Kuya Bong.

Suggested Family Linking Flow

```

Patient Opens Family Section
  v
Selects "Link Adult Family Member" or "Add Child"
  v
For Adult: Enter Registered Mobile Number or Email Address
  v
Other Adult Receives Link Request
  v
Other Adult Accepts Request
  v
Family Relationship Becomes Active

```

For children:

```

Parent Opens Family Section
  v
Selects "Add Child"
  v
Enters Child Name and Basic Details
  v

```

Child Appears Under Parent Account
 v
 Administrator Can Assign or Allow Shared Package Usage

12. Herbal and Supplement Tracking Concept

The MVP should provide a lightweight product catalogue and customer follow-up tool rather than a full e-commerce or inventory system. Kuya Bong should be able to manage the herbal and supplement products he sells, including each product price.

Suggested Product Catalogue Record

Field	Description
Product ID	Unique internal identifier.
Product Name	Name of herbal product or supplement.
Product Category	Optional classification such as herbal or supplement.
Selling Price	Current selling price managed by Kuya Bong.
Active Status	Indicates whether the product is currently available for selection.
Notes	Optional product description or usage notes.

Suggested Purchase Record

Field	Description
Patient	Person who purchased or received the product.
Product	Product selected from the managed catalogue.
Unit Price at Time of Sale	Stored price snapshot so historical records remain accurate after a future price change.
Purchase Date	Date of purchase.
Quantity	Optional but recommended.
Estimated Usage Duration	Optional number of days.
Estimated Follow-Up Date	Optional calculated date.
Notes	Optional comments from Kuya Bong.
Follow-Up Status	Optional: Not Due, Due, Contacted, or Completed.

Suggested Administrator View

Patient	Product	Unit Price	Last Purchase Date	Estimated Follow-Up Date	Follow-Up Status
---------	---------	------------	--------------------	--------------------------	------------------

This feature can later support reminders or notifications.

13. Proposed Mobile App Navigation

13.1 Patient Navigation

Main Menu Item	Purpose
Home	Show upcoming appointment, booking shortcut, clinic reminder, and package balance summary.
Book Appointment	Search and reserve available time slots.
My Appointments	View upcoming, completed, cancelled, and rescheduled appointments.

Main Menu Item	Purpose
My Packages	View package balance, expiry date, and family usage history.
Family	Link spouse account and add children.
Clinics	View Clinic A and Clinic B information.
Profile	Update personal information, account settings, and password.

13.2 Administrator Navigation

Main Menu Item	Purpose
Dashboard	Show today's appointments, pending requests, and follow-up reminders.
Calendar	Publish, edit, and review appointment slots.
Appointments	Search and manage bookings by clinic, date, patient, and status.
Patients	View patient profiles, family links, and appointment history.
Packages	Create package types and assign packages to patients.
Products	Manage the herbal and supplement catalogue, update prices, and record purchases.
Follow-Ups	Review patients whose products may be close to finishing.
Clinics	Update clinic names and view clinic configuration.
Settings	Manage account and application settings.

14. Initial Screen List for GUI Design

14.1 Shared Screens

Screen	Purpose
Splash Screen	Display the Kuya Bong brand when the app opens.
Welcome Screen	Introduce the app and provide login or registration options.
Login Screen	Allow registered users to sign in.
Registration Screen	Collect patient registration details.
Verification Screen	Verify mobile number, email address, or both.
Forgot Password Screen	Allow patients to securely reset a forgotten password.
Profile Screen	View and update user information.

14.2 Patient Screens

Screen	Purpose
Patient Home Dashboard	Show upcoming booking, clinic details, package balance, and booking shortcut.
Clinic Selection Screen	Choose Clinic A or Clinic B.
Availability Calendar	View available dates and time slots.
Booking Review Screen	Confirm selected clinic, date, and time.
Booking Confirmation Screen	Display successful reservation details.
My Appointments Screen	View upcoming and previous appointments.
Appointment Details Screen	View clinic, time, status, and reschedule or cancellation options.

Screen	Purpose
My Packages Screen	View active, used, expired, and remaining package sessions.
Package Details Screen	View expiry date and usage by family member.
Family Members Screen	Link spouse or add children.
Add Child Screen	Add a child without a separate login.

14.3 Administrator Screens

Screen	Purpose
Administrator Dashboard	Review today's schedule, bookings, pending actions, and follow-ups.
Availability Management Screen	Create and update appointment slots.
Appointment Management Screen	View and manage all appointments.
Manual Booking Screen	Assign a slot to a patient manually.
Patient Search Screen	Find registered patients.
Patient Profile Screen	Review appointments, packages, family members, and product purchases.
Package Definition Screen	Create and manage package templates.
Assign Package Screen	Assign a package and configure validity.
Package Usage Screen	Review deductions and remaining sessions.
Product Catalogue Screen	Create, edit, activate, deactivate, and price herbal or supplement products.
Product Purchase Screen	Record herbal or supplement purchases using products from the catalogue.
Follow-Up List Screen	Review patients who may need to purchase products again.
Clinic Settings Screen	Update Clinic A and Clinic B names.

15. High-Level Conceptual Data Model

The following illustration is intended as an initial guide for the developer.

```

USER
├── User ID
├── Role: Patient or Administrator
├── Name
├── Mobile Number
├── Email Address
└── Verification Status

PATIENT PROFILE
├── Patient ID
├── Linked User ID
├── Basic Patient Details
└── Family Group ID

FAMILY MEMBER
├── Family Member ID
├── Family Group ID
├── Name
├── Relationship Type
├── Linked User ID, if registered adult
└── Parent User ID, if child

CLINIC
├── Clinic ID
└── Clinic Name

```

- Address
- Active Status

APPOINTMENT SLOT

- Slot ID
- Clinic ID
- Date
- Start Time
- End Time
- Availability Status

APPOINTMENT

- Appointment ID
- Slot ID
- Patient or Family Member ID
- Booking Status
- Booking Source: App or Manual
- Completion Status

PACKAGE DEFINITION

- Package Type ID
- Package Name
- Number of Sessions
- Validity Period

PATIENT PACKAGE

- Patient Package ID
- Package Type ID
- Owner Patient ID
- Assignment Date
- Expiry Date
- Remaining Sessions
- Package Status

PACKAGE USAGE

- Usage ID
- Patient Package ID
- Appointment ID
- Patient or Family Member ID
- Usage Date
- Recorded By

PRODUCT CATALOGUE

- Product ID
- Product Name
- Category
- Current Selling Price
- Active Status
- Notes

PRODUCT PURCHASE

- Purchase ID
- Patient ID
- Product ID
- Unit Price at Time of Sale
- Purchase Date
- Quantity
- Estimated Follow-Up Date
- Notes

16. Important Business Rules

ID	Rule
BR-01	A patient must register and complete verification before booking an appointment.
BR-02	Each appointment slot must belong to a specific clinic, date, and time.
BR-03	A confirmed appointment slot cannot be booked by another patient.
BR-04	Patients may reschedule only to available slots.
BR-05	Patients and administrators may cancel appointments before the scheduled session, subject to the agreed

ID	Rule
	cancellation policy.
BR-06	Kuya Bong may create appointments manually for requests received by phone or other channels.
BR-07	Kuya Bong may mark a session as completed after treatment has been delivered.
BR-08	A treatment package must have a defined number of included sessions.
BR-09	A treatment package must have an expiry date.
BR-10	Package sessions cannot be used after the package expires, even when a balance remains.
BR-11	Package sessions should be deducted only after treatment completion.
BR-12	Package usage must identify which patient or family member received the session.
BR-13	Children may be linked to a parent account without creating their own app login.
BR-14	Adult family members should use their own verified accounts before linking profiles.
BR-15	Clinic names must be editable by the administrator.
BR-16	Product purchase records should store the patient, selected catalogue product, price at the time of sale, and purchase date.
BR-17	A patient must be able to securely reset a forgotten password after identity verification.
BR-18	Kuya Bong must be able to create, edit, activate, deactivate, and update the price of herbal and supplement products.
BR-19	Updating a catalogue price must not overwrite the price stored in historical purchase records.

17. Non-Functional Requirements

Because the app will contain personal information and treatment-related records, privacy and security are important.

Area	Initial Requirement
Security	Users must authenticate before accessing private information.
Verification	Patient registration must include verified email address, verified mobile number, or both.
Account Recovery	Forgotten-password reset must verify the patient identity before allowing a new password.
Role-Based Access	Patients must not access administrator functions.
Privacy	Personal data, family information, appointment history, and treatment package usage must be protected.
Auditability	Important administrator actions should be recorded, including manual bookings, cancellations, package assignments, and package deductions.
Reliability	The system must prevent double booking.
Usability	Booking should require only a small number of simple steps.
Performance	Available time slots and confirmation screens should load quickly.
Scalability	The design should allow more clinics and additional staff roles in future releases.
Platform Support	The mobile app should be designed for both iOS and Android.
Backup	Business-critical records should be backed up securely.
Notifications	The app should support booking confirmations and appointment reminders, subject to confirmation of the notification method.

18. Recommended MVP Priorities

Priority	Feature Group	Reason
Must Have	Registration, verification, login, and patient profile	Patients need verified accounts before booking.
Must Have	Clinic selection and appointment slot management	This addresses the main operational problem.
Must Have	Booking, rescheduling, cancellation, and confirmation	These are the core patient journeys.
Must Have	Administrator calendar and manual booking	Kuya Bong needs to manage both app and phone requests.
Must Have	Session completion status	Required for accurate treatment tracking.
Must Have	Package creation, assignment, balance, expiry, and deduction	This is a major business requirement.
Must Have	Basic family linking	Required for shared packages.
Must Have	Herbal and supplement catalogue, price management, purchase recording, and last purchase date	Supports product sales tracking and timely follow-up.
Should Have	Appointment reminders	Reduces forgotten sessions and clinic confusion.
Should Have	Follow-up date and follow-up status for products	Improves customer retention.
Should Have	Appointment history and package usage history	Improves transparency and support.
Could Have	No-show tracking	Useful for future operational analysis.
Could Have	Dashboard charts and reports	Helpful but not essential for the initial release.

19. Client-Facing Value Proposition

The Kuya Bong App will provide a simpler and more organized experience for both Kuya Bong and his patients.

For Patients

- Easily see available appointment slots.
- Select the correct clinic before booking.
- Receive clear appointment confirmation.
- Reschedule or cancel appointments more easily.
- View remaining treatment package sessions.
- Share eligible treatment packages with family members.

For Kuya Bong

- Publish availability for both clinics.
- Reduce booking confusion and manual scheduling effort.
- See who is booked by clinic, date, and time.
- Manage phone reservations in the same system.
- Track completed treatment sessions.
- Track package balances and expiry dates.
- Maintain the list and current selling prices of herbal and supplement products.
- Monitor herbal and supplement purchase history.
- Follow up with patients when products may be close to finishing.

20. Open Questions for Client Discussion

20.1 Business and Branding

ID	Question
Q-01	What are the official names, addresses, and contact details of Clinic A and Clinic B?
Q-02	Is "Kuya Bong" the final app name and brand name?
Q-03	Does the client already have a logo, brand colors, and clinic photos?

20.2 Appointment Management

ID	Question
Q-04	What is the standard appointment duration: 30 minutes, 45 minutes, 60 minutes, or variable?
Q-05	Does Kuya Bong provide treatment alone, or are other therapists involved?
Q-06	Should patients choose the service type, such as physiotherapy, chiropractic treatment, or massage?
Q-07	Should booking confirmation be automatic or require Kuya Bong's approval?
Q-08	How late may a patient cancel or reschedule an appointment?
Q-09	Should the app record no-shows?
Q-10	Should the patient receive reminders by push notification, SMS, email, or a combination?
Q-11	Can Kuya Bong block unavailable dates, breaks, and holidays?

20.3 Patient Registration

ID	Question
Q-12	Which details are required during registration: full name, mobile number, email, date of birth, gender, address, or emergency contact?
Q-13	Should verification use mobile OTP, email verification, or both?
Q-14	Can patients edit all profile information themselves, or must some changes be approved?

20.4 Treatment Packages

ID	Question
Q-15	Can a patient have more than one active package at the same time?
Q-16	Does a package start on the assignment date, purchase date, or first completed treatment date?
Q-17	Can Kuya Bong manually add or restore package sessions when correcting a mistake?
Q-18	Can expired packages be extended manually?
Q-19	May all family members use the package automatically, or must Kuya Bong approve each family member?
Q-20	Can package sessions be used for all service types or only selected treatments?

20.5 Herbal and Supplement Records

ID	Question
Q-21	Which herbal and supplement products should be loaded into the initial catalogue?
Q-22	Should the app record quantity, unit price, estimated usage duration, and follow-up date for each purchase?

ID	Question
Q-23	Should Kuya Bong receive reminders when a patient may need a new supply?
Q-24	Will patients be able to view their product purchase history?
Q-25	Is stock quantity or inventory tracking required in a future phase?

20.6 Administration and Future Growth

ID	Question
Q-26	Will Kuya Bong be the only administrator during the MVP?
Q-27	Should receptionists or clinic staff have their own accounts?
Q-28	Does the client need a web-based administration portal in addition to the mobile app?
Q-29	Does the client currently use spreadsheets, calendars, messaging apps, or another system for bookings?
Q-30	Is data migration required from an existing patient list?

21. Risks and Dependencies

Risk or Dependency	Impact	Recommended Action
Booking approval process is unclear	GUI and workflow may need redesign later.	Confirm whether reservations are automatic or manually approved.
Appointment duration is unknown	Calendar and slot design cannot be finalized.	Confirm standard and variable durations.
Family package rules are incomplete	Package deduction logic may be incorrect.	Confirm who may share packages and whether approval is required.
Staff structure is unknown	Administrator design may be too limited.	Confirm whether receptionists or other therapists need access.
Notification channels are unknown	Reminder implementation may change cost and scope.	Decide whether to use push notifications, SMS, email, or a combination.
Existing records are unknown	Manual migration effort may be underestimated.	Ask whether patient and package records already exist in spreadsheets or another system.
Health-related information may be stored	Privacy and security requirements may increase.	Define the minimum data required for the MVP and avoid collecting unnecessary sensitive information.

22. Recommended Next Steps

14. Review this document internally with the developer and systems analyst.
15. Conduct a structured discussion with Kuya Bong using the open questions in Section 20.
16. Confirm the MVP scope and identify which recommended features may be deferred.
17. Prepare low-fidelity wireframes for the patient booking flow and administrator calendar.
18. Define the appointment status rules and package deduction rules.
19. Confirm whether the MVP requires a web administration portal.
20. Create a revised Version 0.2 after stakeholder feedback.
21. Prepare a simple client-facing proposal using the approved workflows and screen concepts.

23. Initial Wireframe Focus

The developer should begin with the following priority screens:

Patient Flow

```
Welcome
-> Register
-> Verify Account
-> Patient Home
-> Select Clinic
-> Select Date
-> Select Time Slot
-> Review Reservation
-> Booking Confirmation
-> My Appointments
```

Administrator Flow

```
Administrator Login
-> Dashboard
-> Availability Calendar
-> Select Clinic
-> Add or Modify Slots
-> Review Bookings
-> Open Appointment
-> Confirm, Reschedule, Cancel, or Complete Session
```

Package Flow

```
Patients
-> Open Patient Profile
-> Assign Package
-> Set Sessions and Expiry Date
-> Link Eligible Family Members
-> Review Usage History
```

Herbal and Supplement Flow

```
Products
-> Manage Product Catalogue and Prices
-> Patients
-> Open Patient Profile
-> Record Product Purchase
-> Select Product and Confirm Price
-> Set Follow-Up Date
-> Review Follow-Up List
```

24. Working Terminology

Term	Meaning
Patient	Registered adult user receiving treatment or managing dependents.
Family Member	Linked spouse, child, or approved dependent.
Clinic	Physical location where treatment is delivered.
Slot	A specific available appointment time at a clinic.
Appointment	A reserved treatment session.
Package	A prepaid or assigned bundle of treatment sessions.
Package Usage	A completed treatment session deducted from a package.
Product Catalogue	The managed list of herbal and supplement products sold by Kuya Bong, including current prices.
Product Purchase	A recorded herbal or supplement transaction linked to a catalogue product.
Administrator	Kuya Bong or an authorized business user managing the system.

END OF BLUEPRINT
