

KUYA BONG

MOBILE APP

Product Concept and Solution Blueprint

Document Version: 0.8 - Updated Draft with Package Assignment Initialization and Correction Controls

Status: For Internal Review and Stakeholder Discussion

Primary Audience: Developer, Systems Analyst, Analyst, and Sales Team

Prepared for: Kuya Bong App Project

Important note: This document is a working blueprint. It separates confirmed requirements, recommended rules, and open questions. Development should not start on unclear rules until the relevant open questions are confirmed.

How to Use This Blueprint

This blueprint is designed for two working audiences. It gives the developer enough functional and data-model direction to plan the application, while giving the systems analyst enough business context to prepare client-facing explanations and visuals.

Audience	How to Use This Document
Developer	Use the roles, workflows, business rules, screen list, and data model as input for architecture planning, database design, API planning, and GUI wireframes.
Systems Analyst	Use the business background, problem statements, solution overview, feature descriptions, and diagrams as input for client-facing proposals, prototype walkthroughs, and marketing materials.
Project / Business Analyst	Use the open questions, risks, and MVP priorities to guide stakeholder discussions and requirement validation.

Version 0.8 Update Summary

Area	Update Included in v0.7
Clinic Management	Expanded from editable clinic names to add, edit, deactivate, and controlled deletion.
Announcements	Added admin-created announcements with push notification, expiry date, and manual unpublish/pull capability.
Roles and Permissions	Added Master Admin, configurable Sub-Admin access, and Physiotherapist as a new role linked to registered users.
Physiotherapist Management	Physiotherapists are selected from registered users, not entered as free-text names. They can view/manage only assigned appointments.
User Deactivation	Master Admin can manually deactivate users without deleting historical records.
Product Management	Added product photo upload, automatic image compression/resizing, and product photo display.
Family and Friends	Family and Friends remain separate categories. Friends require mutual confirmation and package benefit sharing must be done by credit transfer.
Reports	Added financial ad-hoc reports and household-level spending / active package report.
Sub-Admin Control	Added one central checkbox-based permission panel applicable to all Sub-Admins.
Package Assignment Initialization	When assigning a package/subscription, Kuya can edit Remaining Sessions. Default equals the package number of sessions, and the value cannot be less than 0. This supports entry of existing active subscriptions.
Assigned Package Correction	Authorized admins can manually edit assigned remaining sessions and pull back/delete a wrongly assigned subscription, with audit logging and safeguards.

Document Map

Section	Content
1-5	Purpose, business background, business problems, proposed solution, product objectives.
6-8	MVP scope, roles, permissions, and core functional requirements.
9-12	User journeys, appointment statuses, business rules, and conceptual data model.
13-16	GUI navigation, non-functional requirements, MVP priorities, and open questions.
17-18	Risks, dependencies, and recommended next steps.

1. Document Purpose

This document defines the product concept, business requirements, MVP scope, workflows, user roles, business rules, and proposed screen structure for the Kuya Bong Mobile App.

It is not yet a final software specification. It should be used to align the client, analyst, developer, and sales team before detailed design and implementation.

2. Business Background

Kuya Bong is an experienced physiotherapist and chiropractor who is well known in his city. Many patients visit him for physiotherapy, muscle pain, body aches, chiropractic support, massage-related services, and other therapy services.

He operates under the business name "Kuya Bong" and currently serves patients from two clinics. The official clinic names are still to be confirmed; this document refers to them as Clinic A and Clinic B.

Business Area	Description
Services	Appointment-based services such as Physiotherapy & Massage and Grounding Machine Therapy.
Products	Herbal and supplement product sales, including purchase tracking, product photos, pricing, and follow-up.

3. Business Problems

3.1 Appointment Booking and Clinic Coordination

- Patients cannot easily see available appointment slots.
- Patients may be confused about which clinic they booked.
- Different services have different durations, so the booking engine must block the correct time period.
- The same therapist cannot be assigned to overlapping appointments in different clinics.
- The same patient should not have overlapping appointments.
- Manual phone requests still need to be entered into the system by authorized admin users.

3.2 Package and Credit Tracking

- Treatment packages may contain multiple sessions and have an expiry date.
- Family members may use shared package sessions if allowed.
- Friends cannot directly use a package; package benefit sharing with Friends must be done through confirmed package credit transfer.
- The system must track who used each session or credit and preserve the original expiry date after transfer.

3.3 Product Sales, Product Photos, and Follow-Up

- Kuya sells herbal and supplement products and needs a manageable product list.
- Products may have photos visible to users.
- High-resolution product images should be compressed and resized automatically before storage.
- The system should help Kuya know when to follow up based on purchase history.

3.4 Security, Roles, and Operational Control

- Kuya needs to appoint Sub-Admins with controlled permissions.
- Physiotherapists should log in and manage only their own schedules.
- Kuya must be able to deactivate users when they are no longer active or should not access the app.
- Important actions should be logged for audit and support.

4. Proposed Solution

The proposed solution is a single mobile application called the Kuya Bong App, published on the Apple App Store and Google Play Store. The app will serve multiple roles through one application using role-based access.

Role / Actor	Main Purpose
Master Admin	Kuya Bong. Full control over users, roles, configuration, clinics, services, reports, and operations.
Sub-Admin	Registered user appointed by Kuya to help with operations, limited by a central permission configuration.
Physiotherapist	Registered user appointed by Kuya to provide treatment and manage only appointments assigned to him/her.
Patient / Normal User	Registered customer who books appointments, manages profile, views packages, links Family and Friends, and views permitted information.

The MVP should not require separate applications for admin users and patients.

5. Product Objectives

1. Simplify patient registration, login, verification, and password reset.
2. Allow patients to search availability and book appointments by service, clinic, date, time, and assigned physiotherapist.
3. Prevent double booking for therapists, clinics, and patients.
4. Allow Kuya to publish and manage availability across clinics and physiotherapists.
5. Support manual booking, rescheduling, cancellation, session completion, and cancellation reasons.
6. Support service type management, including service duration used by the booking engine.
7. Support treatment packages, expiry rules, usage history, Family sharing, Friend credit transfer, remaining-session initialization, and controlled correction of assigned subscriptions.
8. Support product catalogue management, product pricing, product photos, purchase tracking, and follow-up.
9. Support customer announcements and push notifications.
10. Support financial reports and household-level spending / active package reports.
11. Support Master Admin, Sub-Admin, Physiotherapist, and Patient role management.
12. Protect data through secure authentication, role-based access, user deactivation, and audit logging.

6. MVP Scope

6.1 Included in the MVP

Feature Area	Included Capabilities
Single Mobile App	One app for patients, Master Admin, Sub-Admins, and Physiotherapists, using role-based access.
Registration and Security	User registration, verified contact details, login, forgotten-password reset, and manual user deactivation by Master Admin.
Clinic Management	Add, edit, deactivate, and delete clinics only when no linked historical records exist.
Service Type Management	Create and manage services such as Physiotherapy & Massage and Grounding Machine Therapy, including duration.
Physiotherapist Management	Assign registered users as Physiotherapists; allow them to view and manage only their own assigned appointments.
Availability and Booking	Publish availability by clinic, service, physiotherapist, date, and time. Block appointments according to service duration.
Appointment Management	Book, reschedule, cancel, complete sessions, and record cancellation reasons.
Manual Admin Booking	Admin users can create bookings received by phone or other offline channels.
Packages	Create package definitions, assign packages, track usage, remaining balance, expiry, and related family/friend rules.
Family Members	Add/link Family members and allow booking/package usage according to approved rules.
Friends	Add Friends through mutual confirmation; allow package credit transfer only between confirmed Friends.
Product Catalogue	Manage products, prices, active status, photos, purchase records, and follow-up information.
Product Photo Optimization	Compress and resize uploaded product images before storage.
Announcements	Create announcements, push notifications, set expiry dates, unpublish manually, and keep admin history.
Sub-Admin Permissions	Central checkbox panel for Kuya to control what all Sub-Admins can do or see.
Reports	Generate financial ad-hoc reports and household spending / active package reports; share report from mobile, preferably as PDF.
Package Assignment Initialization	When assigning a package/subscription, Remaining Sessions defaults to the package session count but can be edited by Kuya to initialize existing subscriptions.
Assigned Subscription Correction	Authorized admins can manually edit Remaining Sessions and pull back/delete a wrongly assigned subscription, subject to validation and audit trail.

6.2 Outside the Current MVP Scope / Future Enhancements

Future Feature	Notes
Online Payment Processing	Still outside MVP unless separately approved. The MVP may record income manually or through price tables without collecting payment online.
Advanced Announcement Targeting	MVP can start with all registered customers; selected customer groups can be Phase 2.
Multiple Sub-Admin Permission Profiles	MVP uses one central configuration for all Sub-Admins. Multiple permission profiles can be Phase 2.
Excel / CSV Export	PDF sharing is recommended for MVP; Excel/CSV can be Phase 2

Advanced Accounting	unless required. Tax, refunds, ledgers, reconciliation, and accounting integrations are outside MVP.
Advanced Physiotherapist Notifications	Future push notifications can inform Physiotherapists about bookings, cancellations, and rescheduling.

7. User Roles and Permissions

7.1 Master Admin

Kuya Bong is the Master Admin. The Master Admin has full system control and is the only role that can appoint or remove Sub-Admins and Physiotherapists, unless a future rule changes this.

- Manage clinics, services, cancellation reasons, products, therapists/physiotherapists, users, packages, announcements, reports, bookings, and follow-ups.
- Appoint and remove Sub-Admins from registered users.
- Appoint and remove Physiotherapist role from registered users.
- Configure what Sub-Admins can do or see using one central permission panel.
- Manually deactivate users and preserve historical records.

7.2 Sub-Admin

Sub-Admins are registered users appointed by Kuya to support daily operations. Their access is controlled by one central configuration panel that applies to all Sub-Admins.

No.	Sub-Admin Permission Checkbox
1	Manage Booking: create, edit, or delete time-slot availability. If disabled, Sub-Admin can only view calendars like a normal user.
2	Appointment Management: complete session, cancel patient appointment, reschedule user, etc.
3	Manage Clinics: create, edit, delete, or deactivate clinics.
4	Manage Therapists / Physiotherapists: create role assignment, edit, delete, or deactivate where permitted.
5	Manage Patients: assign package, record purchase, update patient-related operational data, etc.
6	Manage Products: create, edit, delete, deactivate products, including photos and prices if enabled.
7	Manage Service Types.
8	Manage Cancellation Reasons.
9	Manage Announcements.
10	Manage Follow-Up List.
11	Generate Financial Reports - Services only.
12	Generate Financial Reports - Products / Sales only.

Sub-Admins cannot appoint or remove other Sub-Admins, cannot change Kuya's Master Admin access, and cannot override the central permission configuration.

7.3 Physiotherapist

Physiotherapists are registered users appointed by Kuya. Physiotherapist data should not be maintained as free-text names. This allows each Physiotherapist to log in and check his/her own schedule.

- View appointments assigned to him/her.
- Check own schedule.
- Cancel or reschedule appointments assigned to him/her, subject to final business rules.
- Cannot manage appointments assigned to other Physiotherapists unless also granted Sub-Admin permissions.
- May receive future push notifications for bookings, cancellations, or rescheduling related to his/her assigned appointments.

7.4 Patient / Normal User

- Register, verify account, log in, reset forgotten password, and maintain profile.
- View services, clinics, products, announcements, and own appointments.
- Book, reschedule, or cancel own appointment, subject to rules.
- Add/link Family members and Friends according to relationship rules.
- View package balance and expiry information when allowed.

- Transfer package credit to confirmed Friends if allowed and if the receiving Friend is a registered confirmed user.

8. Core Functional Requirements

8.1 Account Registration, Password Reset, and User Deactivation

- Patients must register and verify email, mobile number, or both before booking.
- Users must be able to reset forgotten passwords securely.
- Kuya can manually deactivate a user account for reasons such as the user leaving the country or other business/security reasons.
- Deactivated users cannot log in or create new bookings.
- Deactivation must not delete historical appointments, package records, product sales, or financial records.
- If a deactivated user has Sub-Admin or Physiotherapist privileges, those privileges become inactive.

8.2 Clinic Management

- Add new clinic.
- Edit clinic details such as name, address, contact details, and active status.
- Deactivate clinic so it no longer appears for new bookings.
- Delete clinic only when there are no linked transactions or historical records.
- Historical records must continue to show the original clinic information.

8.3 Service Type and Duration Management

Service Example	Example Duration
Physiotherapy & Massage	3 hours
Grounding Machine Therapy	2 hours

- Each appointment must be linked to a selected service type.
- Each service type must have a defined duration.
- The booking engine must calculate appointment end time based on selected service duration.
- If a service starts at 09:00 and duration is 3 hours, the therapist and clinic are reserved from 09:00 to 12:00.

8.4 Booking and Conflict Management

- The same Physiotherapist cannot be assigned to overlapping appointments, including across different clinics.
- The same patient cannot hold overlapping appointments, even if the clinic, service, or therapist is different.
- The system must check service duration availability before confirming a booking.
- Manual bookings entered by admin users must follow the same conflict rules.
- Only valid available start times should be shown to patients after service, clinic, date, and relevant availability are selected.

8.5 Cancellation Reason Management

- Patients must select a cancellation reason when cancelling a booking.
- Kuya can manage cancellation reasons.
- Kuya or authorized admin users can cancel reservations when cancellation requests are received by phone or offline channels.
- The system must record who cancelled the appointment: patient, Master Admin, Sub-Admin, or Physiotherapist.

8.6 Treatment Packages, Family, Friends, and Credit Transfer

Packages can include a defined number of sessions or credit and must have expiry rules. Family and Friends are separate relationship categories.

Family Members

- Family members may include spouse, children, parent, sibling, or other family member.
- If both people are registered users, the relationship should require confirmation by the receiving user.
- Family members may be eligible for booking on behalf of them and package sharing, subject to approved rules.
- The system must record which family member used a package session.

Friends

- Friends must be registered users before receiving transferred package credit.

- If User A links User B as Friend, User B receives a notification and must acknowledge/confirm the relationship.
- A user cannot book on behalf of a Friend.
- A Friend cannot directly use the user's package.
- To share package benefit with a Friend, the user must transfer remaining package credit to the confirmed Friend.
- After transfer, the transferred credit keeps the same expiry date as the original package.
- Credit transfer should record sender, receiver, amount/credit transferred, source package, transfer date, and expiry date.

Package Assignment Initialization and Correction

- When Kuya assigns a package/subscription to a patient, the system should set Remaining Sessions by default to the package number of sessions.
- Kuya should be able to edit the Remaining Sessions value during assignment. This is required to initialize existing subscriptions that already have consumed sessions before the app is used.
- Remaining Sessions must not be less than 0.
- Kuya should be able to manually edit Remaining Sessions after assignment when correcting data or updating migrated/existing subscription records.
- Kuya should be able to pull back/delete an assigned subscription if the wrong package was assigned or the package was assigned to the wrong patient.
- Manual edits and pull-back/delete actions should be logged, including who performed the action, date/time, old value, new value, affected patient, affected package, and reason if provided.
- Recommended safeguard: if an assigned subscription already has usage, transfers, or financial records linked to it, the system should avoid physical deletion and use a cancelled/reversed status instead.

8.7 Product Catalogue, Product Photos, Sales, and Follow-Up

- Kuya can maintain the product list, including product name, price, active status, and photos.
- Kuya can upload one or more product photos.
- The system must automatically compress and resize high-resolution uploaded images before storage.
- Users can see product photos when viewing product names or product details.
- Kuya can record product purchases by patients.
- The system should support follow-up based on last purchase date and estimated product consumption period.

8.8 Announcements and Push Notifications

- Kuya can create announcements such as product promotions, clinic maintenance notices, schedule notices, or general updates.
- Registered customers receive an app notification when an announcement is published.
- Opening the notification shows the announcement inside the app.
- Announcements must have expiry date and automatically disappear from customer view after expiry.
- Kuya can manually pull or unpublish an announcement before expiry.
- Announcement history remains visible to admins for reference.

8.9 Financial Ad-Hoc Reports

Filter	Description	Default
Category	Services or Products	To be selected
From Date	Start date of report period	First day of current month
To Date	End date of report period	Today's date
Service	Appears only when Category = Services	All
Product	Appears only when Category = Products	All

- From Date must not be later than To Date.
- If Category = Services, report lists completed therapy sessions within the selected date range.
- If Category = Products, report lists sold products within the selected date range.
- Report should include income/amount if recorded in the system.
- Report should be shareable from mobile, preferably as PDF through the phone's standard share function.

8.10 Household Spending and Active Package Report

The Household report shows spending and active package/subscription information for a main patient account and linked Family Members. Friends should be shown separately where credit transfer is involved.

- Main patient account owner.
- Linked Family members.

- Total spending amount.
- Active package or subscription.
- Package start date and expiry date.
- Total sessions or credits included.
- Used and remaining balance.
- Which family member used each session.
- Friend credit transfers, if relevant.

9. Core User Journeys

9.1 Patient Booking Journey

Download App

- > Register / Log In
- > Verify Account
- > Select Service Type
- > Select Clinic
- > Select Date
- > System Shows Valid Available Start Times
- > Select Time Slot
- > Review Details
- > Confirm Booking
- > Receive Confirmation

9.2 Admin Availability and Booking Management Journey

Master Admin / Authorized Sub-Admin Login

- > Open Calendar / Availability
- > Select Clinic, Service, Physiotherapist, Date
- > Add or Modify Available Time Slots
- > System Checks Conflicts
- > Publish Availability
- > Review Bookings
- > Confirm, Reschedule, Cancel, or Complete Sessions

9.3 Physiotherapist Schedule Journey

Physiotherapist Login

- > Open My Schedule
- > View Assigned Appointments
- > Open Appointment Details
- > Cancel or Reschedule Own Assigned Appointment if Permitted
- > System Records Action and Notifies Relevant Parties if Supported

9.4 Friend Linking and Credit Transfer Journey

User A Sends Friend Link Request to User B

- > User B Receives Notification
- > User B Confirms Friend Relationship
- > Friend Link Becomes Active
- > User A Selects Package Credit Transfer
- > System Validates Active Package and Expiry
- > Credit Transfers to User B with Same Expiry Date
- > Both Users See Updated Credit / Transfer History

9.5 Product Follow-Up Journey

Admin Opens Patient Record

- > Records Product Purchase
- > System Stores Product, Quantity, Price, Date, and Notes
- > Follow-Up Date is Calculated or Entered
- > Follow-Up List Shows Due Patients
- > Admin Contacts Patient and Updates Follow-Up Status

10. Appointment Status Model

Status	Description
Available	Slot has been published and may be booked.
Pending Approval	Patient requested the slot, but approval is required if this rule is enabled.
Confirmed	Appointment is reserved and active.
Rescheduled	Original booking was moved to a new appointment time.
Cancelled by Patient	Patient cancelled and selected a reason.
Cancelled by Admin	Admin cancelled, including phone/offline cancellation requests.
Cancelled by Physiotherapist	Assigned Physiotherapist cancelled or requested cancellation if permitted.
Completed	Treatment session was delivered.
No-Show	Patient did not attend. Recommended for discussion.

Recommended MVP decision: automatically confirm bookings for published slots unless Kuya confirms that manual approval is required.

11. Key Business Rules

ID	Business Rule
BR-01	A user must register and complete required verification before booking.
BR-02	Users must be able to reset forgotten passwords securely.
BR-03	Master Admin can deactivate users without deleting historical records.
BR-04	A clinic can be deleted only if no linked historical records exist; otherwise it can only be deactivated.
BR-05	Each appointment must be linked to a service type with a defined duration.
BR-06	Appointment end time is calculated from start time plus service duration.
BR-07	The same Physiotherapist cannot be assigned to overlapping appointments.
BR-08	The same patient cannot have overlapping appointments.
BR-09	Physiotherapists must be selected from registered users, not entered as free text.
BR-10	Physiotherapists can manage only appointments assigned to them unless given additional Sub-Admin permission.
BR-11	A confirmed appointment slot cannot be double booked.
BR-12	Cancellation must include a cancellation reason when required.
BR-13	Package sessions or credits cannot be used after expiry.
BR-14	Package deduction should happen only after session completion, unless a separate credit-transfer rule applies.
BR-15	Family and Friends are separate relationship categories.
BR-16	Friend linking requires notification and confirmation by the receiving user.
BR-17	Friends cannot be booked for directly and cannot directly use another user's package.
BR-18	Package credit can be transferred to a Friend only after both users are registered and the Friend relationship is confirmed.
BR-19	Transferred package credit keeps the original package expiry date.
BR-20	Product images must be compressed and resized before storage.
BR-21	Announcements automatically stop appearing to customers after expiry or after being manually pulled.
BR-22	Only Master Admin can appoint/remove Sub-Admins and Physiotherapists unless future rules say otherwise.
BR-23	Sub-Admin access is controlled by a central checkbox permission panel applicable to all Sub-Admins.
BR-24	Financial report access depends on role and permissions.
BR-25	Important actions should be logged for audit purposes.

BR-26	When assigning a package/subscription, Remaining Sessions should default to the package number of sessions.
BR-27	Remaining Sessions may be edited during package assignment to initialize existing subscriptions.
BR-28	Remaining Sessions must never be less than 0.
BR-29	Authorized admins may manually edit Remaining Sessions after assignment for correction or data initialization purposes.
BR-30	Authorized admins may pull back/delete a wrongly assigned subscription if assigned to the wrong patient or wrong package was selected.
BR-31	If an assigned subscription already has usage, transfer, or financial history, the system should preserve history and use a cancelled/reversed status rather than unsafe deletion.
BR-32	All manual changes to assigned subscriptions and Remaining Sessions must be logged for audit purposes.

12. High-Level Conceptual Data Model

The following conceptual entities are intended to guide the developer. Field names are indicative and should be refined during technical design.

Entity	Key Fields / Notes
User	User ID, name, mobile, email, verification status, active status, role flags.
Role Assignment	User ID, role type, assigned by, assigned date, removed date, active flag.
Sub-Admin Permission Config	One central set of permission flags for all Sub-Admins.
Patient Profile	Patient ID, linked User ID, demographic details, active status.
Family Link	Requester User ID, target User ID or child record, relationship type, confirmation status.
Friend Link	Requester User ID, target User ID, confirmation status, request date, confirmation date.
Clinic	Clinic ID, name, address, contact details, active/deactivated status.
Service Type	Service ID, service name, duration, active status.
Physiotherapist	Physiotherapist ID, linked User ID, active status.
Appointment Slot	Slot ID, clinic, service, physiotherapist, start time, end time, availability status.
Appointment	Appointment ID, patient, family member if applicable, clinic, service, physiotherapist, status, cancellation data.
Package Definition	Package type, included sessions/credits, validity period, active status.
Patient Package	Patient Package ID, Package Type ID, owner patient, assignment date, expiry date, original number of sessions, Remaining Sessions, status, assignment source (new / migrated / existing), correction history, pull-back/delete or cancellation status, and audit fields.
Package Usage	Package, appointment, user/family member, usage date, recorded by.
Package Credit Transfer	Sender, receiver Friend, source package, transferred credit, transfer date, expiry date.
Product	Product ID, name, price, active status, description.
Product Photo	Photo ID, product, optimized image path, original metadata if needed.
Product Purchase	Patient, product, quantity, unit price snapshot, total amount, purchase date, notes.
Follow-Up Record	Patient, product purchase, follow-up date, status, notes.
Announcement	Title, message, publish date, expiry date, status, created by, pulled by.
Financial Report Log	Optional generated report criteria and generated by data.
Audit Log	Action, actor, affected record, timestamp, before/after notes where needed.
Package Adjustment / Correction Log	Log ID, Patient Package ID, action type, old remaining sessions, new remaining sessions, reason, performed by, performed date/time, and related usage/transfer reference if applicable.

13. Proposed Mobile App Navigation and Screen List

13.1 Patient Navigation

Menu Item	Purpose
Home	Upcoming appointment, booking shortcut, announcements, and

	package balance summary.
Book Appointment	Select service, clinic, date, time, and book available slot.
My Appointments	View, reschedule, or cancel upcoming appointments.
My Packages	View package balance, expiry, usage history, and transfer options if allowed.
Family	Add or link Family members and manage family relationship confirmations.
Friends	Send/accept Friend link requests and transfer package credit to confirmed Friends.
Products	View product list and product photos where available.
Announcements	View active announcements.
Profile	Update account information and password.

13.2 Master Admin / Sub-Admin Navigation

Menu Item	Purpose
Dashboard	Today's appointments, pending actions, follow-ups, announcements, and reports shortcuts.
Calendar / Availability	Manage availability by clinic, service, physiotherapist, and date.
Appointments	Search and manage bookings by clinic, date, service, patient, physiotherapist, and status.
Patients / Users	Search users, view patient records, deactivate users, assign packages, and view relationships.
Roles	Master Admin appoints/removes Sub-Admins and Physiotherapists.
Sub-Admin Permissions	Master Admin configures central checkbox permission panel.
Clinics	Manage clinic records.
Services	Manage service types and durations.
Physiotherapists	View registered users appointed as Physiotherapists.
Packages	Create package types, assign packages, initialize Remaining Sessions, manually correct remaining sessions, pull back/delete wrong assignments, and review usage history.
Products	Manage products, prices, active status, and product photos.
Product Sales	Record herbal/supplement purchases.
Follow-Up List	Review due follow-ups and update status.
Announcements	Create, publish, expire, and pull announcements.
Reports	Generate financial and household/package reports if permitted.
Settings	Manage account settings and system options.

13.3 Physiotherapist Navigation

Menu Item	Purpose
My Schedule	View appointments assigned to the logged-in Physiotherapist.
Appointment Details	View patient, service, clinic, date, time, and permitted actions.
Notifications	Future area for booking/cancellation/rescheduling alerts.
Profile	Update own account information.

14. Non-Functional Requirements

Area	Requirement
Security	All users must authenticate before accessing private features.
Verification	Registration should verify email, mobile number, or both.
Role-Based Access	Access must depend on role: Master Admin, Sub-Admin, Physiotherapist, Patient.
Permission Control	Sub-Admin permission settings must be centrally controlled by Master Admin.
Privacy	Personal, family, friend, appointment, package, product, and financial data must be protected.
Auditability	Role assignments, user deactivations, bookings, cancellations, package transfers, product changes, and reports should be logged.
Reliability	The system must prevent double booking and invalid date ranges.
Image Optimization	Uploaded product photos must be resized/compressed before storage.
Scalability	Design should support more clinics, therapists, roles, and future features.
Backup	Business-critical records should be backed up securely.
Usability	Patient booking should remain simple despite service duration and conflict checks.
Platform Support	The app should support iOS and Android.

15. MVP Priorities

Priority	Feature Group	Reason
Must Have	Registration, login, verification, password reset, and user deactivation	Required for secure access and operational control.
Must Have	Service types, durations, clinic availability, and booking logic	Core scheduling engine depends on this.
Must Have	Physiotherapist role linked to registered users	Needed so therapists can check and manage their own schedules.
Must Have	Conflict checks for therapist and patient schedules	Prevents operational booking errors.
Must Have	Appointment management and cancellation reasons	Core admin/patient workflow.
Must Have	Package assignment, usage, expiry, Family sharing, and Friend credit transfer	Key business requirement.
Must Have	Master Admin and Sub-Admin permission control	Security and delegation requirement.
Must Have	Product catalogue, prices, photos, and purchase records	Supports product business and follow-up.
Should Have	Announcements with push notification and expiry	Useful for clinic notices and promotions.
Should Have	Financial and household reports	Useful for business visibility if income data is recorded.
Could Have	Excel/CSV export	Useful but PDF sharing can be the MVP.
Could Have	Advanced targeted announcements	Can be Phase 2.
Could Have	Physiotherapist push notifications	Can be Phase 2 unless needed immediately.
Must Have	Package assignment initialization and correction	Needed to migrate or initialize existing subscriptions and correct wrong package assignments safely.

16. Open Questions

ID	Question
Q-01	Are all Version 0.8 requirements included in MVP, or should some be Phase 2?
Q-02	Can a Physiotherapist also be a Sub-Admin at the same time?
Q-03	Can a Physiotherapist create availability for himself/herself, or only Kuya/Sub-Admin can create availability?
Q-04	Can a Physiotherapist cancel/reschedule directly, or only request Kuya approval?
Q-05	Can users transfer partial package credit to Friends, or only full remaining credit?
Q-06	Is transferred credit measured by number of sessions, monetary value, or both?
Q-07	Can transferred credit be transferred again to another Friend?
Q-08	Can Kuya reverse a package credit transfer if made by mistake?
Q-09	Should Sub-Admin permission changes take effect immediately?
Q-10	Should announcements go to all users or selected groups?
Q-11	Should product photos allow one main photo only or multiple photos?
Q-12	Should service income be manually entered, calculated from price lists, or linked to package purchase records?
Q-13	Should package income be recognized when package is sold or when each session is consumed?
Q-14	Should financial report sharing be PDF only, or also Excel/CSV later?
Q-15	Should deactivated users be reactivated later by Kuya if needed?
Q-16	When pulling back/deleting an assigned subscription, should the system allow deletion only before any usage, and use cancellation/reversal after usage exists? Recommended answer: yes.
Q-17	Should editing Remaining Sessions require a mandatory reason note? Recommended answer: yes for audit and accountability.
Q-18	Can Sub-Admins edit Remaining Sessions or pull back/delete assigned subscriptions when Manage Patients permission is enabled, or should this remain Master Admin only?

17. Risks and Dependencies

Risk / Dependency	Impact	Recommended Action
Role overlap is unclear	A user may be Patient, Sub-Admin, and	Confirm role hierarchy and overlap rules.

	Physiotherapist at the same time, causing permission complexity.	
Friend credit transfer rules are incomplete	Incorrect balance or expiry handling may occur.	Confirm partial/full transfer, measurement unit, and reversal rules.
Financial recording method is unclear	Reports cannot be accurate without reliable income data.	Confirm how service/product/package income is recorded.
Sub-Admin permissions are broad	Incorrect permissions could expose financial or sensitive data.	Start with least privilege and test each checkbox.
Product photos may consume storage	High storage cost or slow app performance.	Implement automatic resize/compression.
Physiotherapist schedule ownership is new	Booking and cancellation logic may need redesign.	Confirm exact actions Physiotherapists can perform.
Push notifications depend on technical setup	Announcements and future therapist notifications require app notification infrastructure.	Confirm push notification scope and device permission handling.
Manual package corrections may affect financial/package history	Incorrect edits could create disputes or reporting errors.	Require audit logs, reason notes, and cancellation/reversal status when history exists.

18. Recommended Next Steps

13. Review Version 0.7 internally with developer, systems analyst, analyst, and sales team.
14. Confirm open questions with Kuya Bong, especially physiotherapist permissions, Friend credit transfer, and reporting logic.
15. Update prototype screens to include Family, Friends, Physiotherapist schedule, Sub-Admin permissions, and product photos.
16. Ask developer to validate data model impact, especially role assignment, credit transfer, audit log, and report data.
17. Prepare a small test scenario set covering booking conflicts, user deactivation, Friend confirmation, credit transfer, and report generation.
18. After confirmation, convert this blueprint into more detailed user stories and acceptance criteria.
