

Kuya Bong App - Demo Update Summary

Version

Prepared for: Raymond (Sales) | Date: 23 Jun 2026 | Ref: KBA-BP-20260623-001

This build adds package assignment initialization and correction controls. It lets Kuya enter packages that customers already bought offline, fix mistakes, and pull back a wrongly assigned package.

New in This Update (v0.8)

- Enter Existing Package** When assigning a package, Kuya can set the starting 'Remaining Sessions' (defaults to the full count). This is used to enter an existing package a customer already bought offline - e.g. a 6-session package with only 3 left.
- Edit Remaining** Kuya can correct the remaining sessions on an assigned package at any time (for example to fix a data-entry mistake).
- Remove Package** Kuya can pull back / delete a package that was assigned to the wrong patient.
- Audit Trail** Every initialize, edit, and pull-back is recorded in the Audit Log (who did it and the old/new value).

Already in the Demo (Earlier Updates)

- Physiotherapist login & 'My Schedule', user deactivation, clinics, services & booking, cancellation reasons.
- Packages, Family sharing, Friends + credit transfer, products with photos, purchases & follow-up.
- Announcements (e.g. 'Buy 2 Get 3' herbal promo), reports, household report, Sub-Admin permissions, audit log.

How to Demo (Login Accounts)

Role	Email	Password
Master Admin (Kuya)	admin@reliefexpert.app	admin123
Sub-Admin (Erick)	staff@reliefexpert.app	staff123
Physiotherapist (Dr. Lina)	physio@reliefexpert.app	physio123
Patient (Maria)	maria@example.com	patient123
Patient (Ahmed)	ahmed@example.com	patient123

- Enter existing** Log in as Kuya > Patients > open a patient > Assign Package, then set 'Remaining sessions' (e.g. 3 of 6).
- Correct** On a listed package, use 'Edit remaining' to correct it, or 'Pull back' to remove a wrong one.

Pending / Next Phase

- Minor: clinic contact field and family parent/sibling labels.
- Real phone push, native PDF share, online payment, advanced promo/discount automation - Phase 2.

Demonstration build with sample data and no live backend yet. Prepared by the development team.
