

Kuya Bong App - Demo Update Summary

Version 0.4 - Client Demo Build

Prepared for: Raymond (Sales) | Date: 20 Jun 2026 | Ref: KBA-BP-20260620-001

This update adds the features Kuya requested in the latest meeting. Everything below is live in the demo app and ready to show to customers.

What's New in This Update

- **Clinic Management** Kuya can add new clinics, edit their details, and deactivate a clinic so it stops taking new bookings. A clinic with existing history can't be deleted by mistake - it can only be deactivated, protecting past records.
- **Admin & Sub-Admin** Kuya is the Master Admin. He can appoint a trusted staff member as a Sub-Admin to help with daily work (bookings, sessions, product sales, announcements, reports). Only Kuya controls who is an admin and the core settings (clinics, therapists, services, cancellation reasons).
- **Announcements** Kuya can post announcements (promos, clinic notices, schedule changes) to customers. Each has an expiry date and hides automatically; he can also pull one early. Customers see a notification badge and read the message inside the app.
- **Financial Reports** Kuya can generate an ad-hoc report by date range - product sales (with income) or completed therapy sessions - and share it as a PDF from his phone.

How to Demo (Login Accounts)

Open the app and use the Login screen. The accounts are also listed on the login screen.

Role	Email	Password
Master Admin (Kuya)	admin@reliefexpert.app	admin123
Sub-Admin (Erick)	staff@reliefexpert.app	staff123
Patient (Maria)	maria@example.com	patient123
Patient (Ahmed)	ahmed@example.com	patient123

Tip: To demo cancelling with a reason, open a patient's next-week appointment (Maria or Ahmed) - the Cancel button is enabled and asks for a cancellation reason.

Not Included Yet (Next Phase / Needs a Decision)

- Real phone push notifications - currently shown inside the app only (needs app-store build + notification service).
- Native phone 'share' for the PDF - currently uses the browser's Save-as-PDF.
- Income value for therapy services - services have no price yet, so the services report shows the session count only. (Products already show income.)
- Sending announcements to selected customers only, and Excel/CSV export - planned for later.

Questions to Confirm with Kuya

- Are these features part of the MVP, or a later phase?
- How should service income be recorded (price list, per package, or manual)?
- Should announcements go to all customers or selected ones?
- Report sharing as PDF only, or also Excel/CSV later?

This is a demonstration build (sample data, no live backend yet). Prepared by the development team for the client-facing demo.
