

Additional Requirements from Latest Customer Meeting

Kuya Bong App — Summary for Blueprint Update v0.4

1. Clinic Management

Kuya should be able to manage clinic records from the admin side of the app.

Required capabilities:

- Add a new clinic.
- Edit existing clinic details.
- Deactivate an existing clinic so it no longer appears for new bookings.
- Delete a clinic only if there are no appointments, bookings, sales, packages, or other records linked to it.

Key rule:

If a clinic already has historical transactions, it should not be deleted. It should only be deactivated to protect historical records.

2. Announcements and Push Notifications

Kuya should be able to create announcements and push them to registered customers through app notifications.

Examples:

- Product promotion, such as “Buy one get one free”.
- Clinic notice, such as “Clinic B is under maintenance”.
- Schedule notice.
- General business update.

Required capabilities:

- Create announcement title and message.
- Push the announcement to registered customers.
- Set an expiry date.
- Automatically hide the announcement after the expiry date.
- Manually pull or unpublish an announcement before expiry.
- Keep announcement history for admin reference.

Customers should receive a notification and, when they open it, see the announcement inside the app.

3. Master Admin and Sub-Admin Roles

Kuya should be the **Master Admin** of the system.

As Master Admin, Kuya can:

- Appoint a registered user as Sub-Admin.
- Remove Sub-Admin access.
- Manage core system data such as clinics, therapists, services, and cancellation reasons.
- Access admin functions, reports, announcements, bookings, packages, and product records.

Sub-Admins can help with daily operational tasks, but they should not have full control.

Sub-Admins cannot:

- Add or remove other Sub-Admins.
- Remove or change Kuya's Master Admin access.
- Manage core master data such as clinics, therapists, services, and cancellation reasons.

Key rule:

Only Kuya, as Master Admin, can control Sub-Admin access.

4. Financial Ad-Hoc Reports

Kuya should be able to generate financial reports from the mobile app.

The report should use the following filters:

Filter	Description
Category	Services or Products
From Date	Defaults to the first day of the current month
To Date	Defaults to today's date
Service	Appears only when Category = Services; default is All
Product	Appears only when Category = Products; default is All

Validation rule:

- From Date must not be later than To Date.

Report output:

- If **Services** is selected, the report shows completed therapy sessions within the selected date range.
- If **Products** is selected, the report shows sold products within the selected date range.

The report should include the related amount or income value if recorded in the system.

Kuya should be able to share the generated report from his mobile app, preferably as a PDF using the phone's standard share function.

5. Main Open Questions

Before updating the full blueprint, the following points should be confirmed:

1. Are these requirements part of the MVP or Phase 2?
2. Can Sub-Admins view financial reports?
3. Can Sub-Admins publish announcements, or only Kuya?
4. Should announcements go to all customers or selected customers only?
5. How should service income be recorded: manually, from a price list, or from package records?
6. Should report sharing be PDF only, or also Excel/CSV later?

6. Recommendation

These requirements should be added to the Product Concept and Solution Blueprint as **Version 0.4**.

Recommended treatment:

- Include clinic deactivation and controlled deletion.
- Include Master Admin and Sub-Admin access control.
- Include announcement creation if push notifications are part of the MVP.
- Include financial reporting if income data will be recorded in the app.
- Keep advanced targeting, multiple admin permission levels, Excel export, and online payment processing for a later phase unless Kuya specifically requires them now.
